West Virginia Department of Environmental Protection
Division of Air Quality

Joe Manchin, III
Governor

Stephanie R. Timmermeyer
Cabinet Secretary

Permit to Operate

Pursuant to
Title V
of the Clean Air Act

Issued to:

GrafTech International Holdings Company, Inc.
Anmoore Facility/ Harrison County
R30-03300001-2006

John A. Benedict
Director

Issued: 03-16-2006 • Effective: 03-30-2006
Expiration: 03-16-2011 • Renewal Application Due: 09-16-2010

Permit Number: **R30-03300001-2006**
Permittee: **GrafTech International Holdings Company, Inc.**
Facility Name: **Anmoore Facility**
Mailing Address: **P.O. Box 2170**
Clarksburg, WV 26302-2170

This permit is issued in accordance with the West Virginia Air Pollution Control Act (West Virginia Code §§ 22-5-1 et seq.) and 45CSR30 — Requirements for Operating Permits. The permittee identified at the above-referenced facility is authorized to operate the stationary sources of air pollutants identified herein in accordance with all terms and conditions of this permit.

Facility Location: Anmoore, Harrison County, West Virginia
Mailing Address: P.O. Box 2170
Clarksburg, WV 26302-2170
Telephone Number:(304) 624-7651
Type of Business Entity: Corporation
Facility Description: Carbon and Graphite Manufacturing Facility
SIC Codes: 3624
UTM Coordinates: 561 km Easting • 4,345 km Northing • Zone 17

Any person whose interest may be affected, including, but not necessarily limited to, the applicant and any person who participated in the public comment process, by a permit issued, modified or denied by the Secretary may appeal such action of the Secretary to the Air Quality Board pursuant to article one [§§ 22B-1-1 et seq.], Chapter 22B of the Code of West Virginia. West Virginia Code §22-5-14.

Issuance of this Title V Operating Permit does not supersede or invalidate any existing permits under 45CSR13, 14 or 19, although all applicable requirements from such permits governing the facility's operation and compliance have been incorporated into the Title V Operating Permit.

Table of Contents

2.0. General Conditions

2.1. Definitions

2.1.1. All references to the "West Virginia Air Pollution Control Act" or the "Air Pollution Control Act" mean those provisions contained in W.Va. Code §§ 22-5-1 to 22-5-18.

2.1.2. The "Clean Air Act" means those provisions contained in 42 U.S.C. §§ 7401 to 7671q, and regulations promulgated thereunder.

2.1.3. "Secretary" means the Secretary of the Department of Environmental Protection or such other person to whom the Secretary has delegated authority or duties pursuant to W.Va. Code §§ 22-1-6 or 22-1-8 (45CSR§30-2.12.). The Director of the Division of Air Quality is the Secretary's designated representative for the purposes of this permit.

2.3. Permit Expiration and Renewal

2.3.1. Permit duration. This permit is issued for a fixed term of five (5) years and shall expire on the date specified on the cover of this permit, except as provided in 45CSR§30-6.3.b. and 45CSR§30-6.3.c.
[45CSR§30-5.1.b.]

2.3.2. A permit renewal application is timely if it is submitted at least six (6) months prior to the date of permit expiration.
[45CSR§30-4.1.a.3.]

2.3.3. Permit expiration terminates the source's right to operate unless a timely and complete renewal application has been submitted consistent with 45CSR§30-6.2. and 45CSR§30-4.1.a.3..
[45CSR§30-6.3.b.]

2.3.4. If the Secretary fails to take final action to deny or approve a timely and complete permit application before the end of the term of the previous permit, the permit shall not expire until the renewal permit has been issued or denied, and any permit shield granted for the permit shall continue in effect during that time.
[45CSR§30-6.3.c.]

2.4. Permit Actions

2.4.1. This permit may be modified, revoked, reopened and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.
[45CSR§30-5.1.f.3.]

2.5. Reopening for Cause

2.5.1. This permit shall be reopened and revised under any of the following circumstances:

a. Additional applicable requirements under the Clean Air Act or the Secretary's legislative rules become applicable to a major source with a remaining permit term of three (3) or more years. Such a reopening shall be completed not later than eighteen (18) months after promulgation of the applicable requirement. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the original permit or any of its terms and conditions has been extended pursuant to 45CSR§§30-6.6.a.1.A. or B.

b. Additional requirements (including excess emissions requirements) become applicable to an affected source under Title IV of the Clean Air Act (Acid Deposition Control) or other legislative rules of the Secretary. Upon approval by U.S. EPA, excess emissions offset plans shall be incorporated into the permit.

c. The Secretary or U.S. EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the permit.

d. The Secretary or U.S. EPA determines that the permit must be revised or revoked and reissued to assure compliance with the applicable requirements.

[45CSR§30-6.6.a.]

2.6. Administrative Permit Amendments

2.6.1. The permittee may request an administrative permit amendment as defined in and according to the procedures specified in 45CSR§30-6.4.
[45CSR§30-6.4.]

2.7. Minor Permit Modifications

2.7.1. The permittee may request a minor permit modification as defined in and according to the procedures specified in 45CSR§30-6.5.a.
[45CSR§30-6.5.a.]

2.8. Significant Permit Modification

2.8.1. The permittee may request a significant permit modification, in accordance with 45CSR§30-6.5.b., for permit modifications that do not qualify for minor permit modifications or as administrative amendments.
[45CSR§30-6.5.b.]

2.9. Emissions Trading

2.9.1. No permit revision shall be required, under any approved economic incentives, marketable permits, emissions trading, and other similar programs or processes for changes that are provided for in the permit and that are in accordance with all applicable requirements.
[45CSR§30-5.1.h.]

2.10. Off-Permit Changes

2.10.1. Except as provided below, a facility may make any change in its operations or emissions that is not addressed nor prohibited in its permit and which is not considered to be construction nor modification under any rule promulgated by the Secretary without obtaining an amendment or modification of its permit. Such changes shall be subject to the following requirements and restrictions:

a. The change must meet all applicable requirements and may not violate any existing permit term or condition.

b. The permittee must provide a written notice of the change to the Secretary and to U.S. EPA within two (2) business days following the date of the change. Such written notice shall describe each such change, including the date, any change in emissions, pollutants emitted, and any applicable requirement that would apply as a result of the change.

c. The change shall not qualify for the permit shield.

d. The permittee shall keep records describing all changes made at the source that result in emissions of regulated air pollutants, but not otherwise regulated under the permit, and the emissions resulting from those changes.

e. No permittee may make any change subject to any requirement under Title IV of the Clean Air Act (Acid Deposition Control) pursuant to the provisions of 45CSR§30-5.9.

f. No permittee may make any changes which would require preconstruction review under any provision of Title I of the Clean Air Act (including 45CSR14 and 45CSR19) pursuant to the provisions of 45CSR§30-5.9.

[45CSR§30-5.9]

2.11. Operational Flexibility

2.11.1. The permittee may make changes within the facility as provided by § 502(b)(10) of the Clean Air Act. Such operational flexibility shall be provided in the permit in conformance with the permit application and applicable requirements. No such changes shall be a modification under any rule or any provision of Title I of the Clean Air Act (including 45CSR14 and 45CSR19) promulgated by the Secretary in accordance with Title I of the Clean Air Act and the change shall not result in a level of emissions exceeding the emissions allowable under the permit.
[45CSR§30-5.8]

2.11.2. Before making a change under 45CSR§30-5.8., the permittee shall provide advance written notice to the Secretary and to U.S. EPA, describing the change to be made, the date on which the change will occur, any changes in emissions, and any permit terms and conditions that are affected. The permittee shall thereafter maintain a copy of the notice with the permit, and the Secretary shall place a copy with the permit in the public file. The written notice shall be provided to the Secretary and U.S. EPA at least seven (7) days prior to the date that the change is to be made, except that this period may be shortened or eliminated as necessary for a change that must be implemented more quickly to address unanticipated conditions posing a significant health, safety, or environmental hazard. If less than seven (7) days notice is provided because of a need to respond more quickly to such unanticipated conditions, the permittee shall provide notice to the Secretary and U.S. EPA as soon as possible after learning of the need to make the change.
[45CSR§30-5.8.a.]

2.11.3. The permit shield shall not apply to changes made under 45CSR§30-5.8., except those provided for in 45CSR§30-5.8.d. However, the protection of the permit shield will continue to apply to operations and emissions that are not affected by the change, provided that the permittee complies with the terms and conditions of the permit applicable to such operations and emissions. The permit shield may be reinstated for emissions and operations affected by the change:

a. If subsequent changes cause the facility's operations and emissions to revert to those authorized in the permit and the permittee resumes compliance with the terms and conditions of the permit, or

b. If the permittee obtains final approval of a significant modification to the permit to incorporate the change in the permit.

[45CSR§30-5.8.c.]

2.11.4. "Section 502(b)(10) changes" are changes that contravene an express permit term. Such changes do not include changes that would violate applicable requirements or contravene enforceable permit terms and conditions that are monitoring (including test methods), recordkeeping, reporting, or compliance certification requirements. **[45CSR§30-2.39]**

2.12. Reasonably Anticipated Operating Scenarios

2.12.1. The following are terms and conditions for reasonably anticipated operating scenarios identified in this permit.

a. Contemporaneously with making a change from one operating scenario to another, the permittee shall record in a log at the permitted facility a record of the scenario under which it is operating and to document the change in reports submitted pursuant to the terms of this permit and 45CSR30.

b. The permit shield shall extend to all terms and conditions under each such operating scenario; and

c. The terms and conditions of each such alternative scenario shall meet all applicable requirements and the requirements of 45CSR30.

[45CSR§30-5.1.i.]

2.13. Duty to Comply

2.13.1. The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the West Virginia Code and the Clean Air Act and is grounds for enforcement action by the Secretary or USEPA; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.
[45CSR§30-5.1.f.1.]

2.14. Inspection and Entry

2.14.1. The permittee shall allow any authorized representative of the Secretary, upon the presentation of credentials and other documents as may be required by law, to perform the following:

a. At all reasonable times (including all times in which the facility is in operation) enter upon the permittee's premises where a source is located or emissions related activity is conducted, or where records must be kept under the conditions of this permit;

b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;

c. Inspect at reasonable times (including all times in which the facility is in operation) any facilities, equipment (including monitoring and air pollution Control equipment), practices, or operations regulated or required under the permit;

d. Sample or monitor at reasonable times substances or parameters to determine compliance with the permit or applicable requirements or ascertain the amounts and types of air pollutants discharged.

[45CSR§30-5.3.b.]

2.15. Schedule of Compliance

2.15.1. For sources subject to a compliance schedule, certified progress reports shall be submitted consistent with the applicable schedule of compliance set forth in this permit and 45CSR§30-4.3.h., but at least every six (6) months, and no greater than once a month, and shall include the following:

a. Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved; and

b. An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventative or corrective measure adopted.

[45CSR§30-5.3.d.]

2.16. Need to Halt or Reduce Activity not a Defense

2.16.1. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit. However, nothing in this paragraph shall be construed as precluding consideration of a need to halt or reduce activity as a mitigating factor in determining penalties for noncompliance if the health, safety, or environmental impacts of halting or reducing operations would be more serious than the impacts of continued operations.
[45CSR§30-5.1.f.2.]

2.17. Emergency

2.17.1. An "emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventative maintenance, careless or improper operation, or operator error.
[45CSR§30-5.7.a.]

2.17.2. Effect of any emergency. An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of 45CSR§30-5.7.c. are met.
[45CSR§30-5.7.b.]

2.17.3. The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

a. An emergency occurred and that the permittee can identify the cause(s) of the emergency;

b. The permitted facility was at the time being properly operated;

c. During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit; and

d. Subject to the requirements of 45CSR§30-5.1.c.3.C.1, the permittee submitted notice of the emergency to the Secretary within one (1) working day of the time when emission limitations were exceeded due to the emergency and made a request for variance, and as applicable rules provide. This notice, report, and variance request fulfills the requirement of 45CSR§30-5.1.c.3.B. This notice must contain a detailed description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

[45CSR§30-5.7.c.]

2.17.4. In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.
[45CSR§30-5.7.d.]

2.17.5. This provision is in addition to any emergency or upset provision contained in any applicable requirement.
[45CSR§30-5.7.e.]

2.18. Federally-Enforceable Requirements

2.18.1. All terms and conditions in this permit, including any provisions designed to limit a source's potential to emit and excepting those provisions that are specifically designated in the permit as "State-enforceable only", are enforceable by the Secretary, USEPA, and citizens under the Clean Air Act.
[45CSR§30-5.2.a.]

2.18.2. Those provisions specifically designated in the permit as "State-enforceable only" shall become "Federally-enforceable" requirements upon SIP approval by the USEPA.

2.19. Duty to Provide Information

2.19.1. The permittee shall furnish to the Secretary within a reasonable time any information the Secretary may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the Secretary copies of records required to be kept by the permittee. For information claimed to be confidential, the permittee shall furnish such records to the Secretary along with a claim of confidentiality in accordance with 45CSR31. If confidential information is to be sent to USEPA, the permittee shall directly provide such information to USEPA along with a claim of confidentiality in accordance with 40 C.F.R. Part 2.
[45CSR§30-5.1.f.5.]

2.20. Duty to Supplement and Correct Information

2.20.1. Upon becoming aware of a failure to submit any relevant facts or a submittal of incorrect information in any permit application, the permittee shall promptly submit to the Secretary such supplemental facts or corrected information.
[45CSR§30-4.2.]

2.21. Permit Shield

2.21.1. Compliance with the conditions of this permit shall be deemed compliance with any applicable requirements as of the date of permit issuance provided that such applicable requirements are included and are specifically identified in this permit or the Secretary has determined that other requirements specifically identified are not applicable to the source and this permit includes such a determination or a concise summary thereof. **[45CSR§30-5.6.a.]**

2.21.2. Nothing in this permit shall alter or affect the following:

a. The liability of an owner or operator of a source for any violation of applicable requirements prior to or at the time of permit issuance; or

b. The applicable requirements of the Code of West Virginia and Title IV of the Clean Air Act (Acid Deposition Control), consistent with § 408 (a) of the Clean Air Act.

c. The authority of the Administrator of U.S. EPA to require information under § 114 of the Clean Air Act or to issue emergency orders under § 303 of the Clean Air Act.

[45CSR§30-5.6.c.]

2.22. Credible Evidence

2.22.1. Nothing in this permit shall alter or affect the ability of any person to establish compliance with, or a violation of, any applicable requirement through the use of credible evidence to the extent authorized by law. Nothing in this permit shall be construed to waive any defenses otherwise available to the permittee including but not limited to any challenge to the credible evidence rule in the context of any future proceeding. **[45CSR§30-5.3.e.3.B. and 45CSR38]**

2.23. Severability

2.23.1. The provisions of this permit are severable. If any provision of this permit, or the application of any provision of this permit to any circumstance is held invalid by a court of competent jurisdiction, the remaining permit terms and conditions or their application to other circumstances shall remain in full force and effect. **[45CSR§30-5.1.e.]**

2.24. Property Rights

2.24.1. This permit does not convey any property rights of any sort or any exclusive privilege. **[45CSR§30-5.1.f.4]**

2.25. Acid Deposition Control

2.25.1. Emissions shall not exceed any allowances that the source lawfully holds under Title IV of the Clean Air Act (Acid Deposition Control) or rules of the Secretary promulgated thereunder.

a. No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the acid deposition control program, provided that such increases do not require a permit revision under any other applicable requirement.

b. No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

c. Any such allowance shall be accounted for according to the procedures established in rules promulgated under Title IV of the Clean Air Act.

[45CSR§30-5.1.d.]

2.25.2. Where applicable requirements of the Clean Air Act are more stringent than any applicable requirement of regulations promulgated under Title IV of the Clean Air Act (Acid Deposition Control), both provisions shall be incorporated into the permit and shall be enforceable by the Secretary and U. S. EPA.
[45CSR§30-5.1.a.2.]

3.0. Facility-Wide Requirements

3.1. Limitations and Standards

3.1.1. **Open burning.** The open burning of refuse by any person, firm, corporation, association or public agency is prohibited except as noted in 45CSR§6-3.1.
[45CSR§6-3.1.)]

3.1.2. **Open burning exemptions.** The exemptions listed in 45CSR§6-3.1 are subject to the following stipulation: Upon notification by the Secretary, no person shall cause, suffer, allow or permit any form of open burning during existing or predicted periods of atmospheric stagnation. Notification shall be made by such means as the Secretary may deem necessary and feasible.
[45CSR§6-3.2.]

3.1.3. **Asbestos.** Prior to the commencement of a demolition and/or renovation activity, the permittee shall cause the affected part of the facility to be thoroughly inspected for the presence of asbestos-containing materials, include Category I and Category II nonfriable asbestos-containing material (ACM). If ACMs are found to be present and are subject to regulation under 40 CFR 61, Subpart M, the permittee shall comply with all applicable requirements of 40 CFR 61, Subpart M, including the filing of the Notification of Abatement, Demolition or Renovation and the observance of the mandatory 10 working day waiting period.
[40 CFR §61.145(a)]

Demolition operations, irrespective of the presence or absence of ACMs, are also subject to the notification requirements of 40 CFR §61.145(b)(1), (2), (3)(I) and (iv), and (4)(I) through (vii) and (4)(ix) and (xvi). Please be aware that section 3(I) as referenced above requires the notification to be submitted 10 working days before demolition begins.
[40 CFR §61.145(a)(2)]

*Note: The asbestos inspection must be conducted by an individual holding an asbestos inspector's license, valid at the time of the inspection, issued by the WV Bureau of Public Health under 64 CSR 63. The Asbestos Abatement Licensing Rule does not make any distinction between friable and non-friable ACMs. All ACMs must be removed prior to any activity commencing, which will potentially disturb them.
[64 CSR 63]

3.1.4. **Odor.** No person shall cause, suffer, allow or permit the discharge of air pollutants which cause or contribute to an objectionable odor at any location occupied by the public.
[45CSR§4-3.1 State-Enforceable only.]

3.1.5. **Standby plan for reducing emissions.** When requested by the Secretary, the permittee shall prepare standby plans for reducing the emissions of air pollutants in accordance with the objectives set forth in Tables I, II, and III of 45CSR11.
[45CSR§11-5.2]

3.1.6. **Emission inventory.** The permittee is responsible for submitting, on an annual basis, an emission inventory in accordance with the submittal requirements of the Division of Air Quality.
[W.Va. Code § 22-5-4(a)(14)]

3.1.7. **Ozone-depleting substances.** For those facilities performing maintenance, service, repair or disposal of appliances, the permittee shall comply with the standards for recycling and emissions reduction pursuant to 40 C.F.R. Part 82, Subpart F, except as provided for Motor Vehicle Air Conditioners (MVACs) in Subpart B:

a. Persons opening appliances for maintenance, service, repair, or disposal must comply with the prohibitions and required practices pursuant to 40 C.F.R. §§ 82.154 and 82.156.

b. Equipment used during the maintenance, service, repair, or disposal of appliances must comply with the standards for recycling and recovery equipment pursuant to 40 C.F.R. § 82.158.

c. Persons performing maintenance, service, repair, or disposal of appliances must be certified by an approved technician certification program pursuant to 40 C.F.R. § 82.161.

[40 C.F.R. 82, Subpart F]

3.1.8. **Risk Management Plan.** Should this stationary source, as defined in 40 C.F.R. § 68.3, become subject to Part 68, then the owner or operator shall submit a risk management plan (RMP) by the date specified in 40 C.F.R. § 68.10 and shall certify compliance with the requirements of Part 68 as part of the annual compliance certification as required by 40 C.F.R. Part 70 or 71.
[40 C.F.R. 68]

3.1.9. **Manufacturing Fugitives**. No person shall cause, suffer, allow or permit any manufacturing process or storage structure generating fugitive particulate matter to operate that is not equipped with a system, which may include, but not be limited to, process equipment design, control equipment design or operation and maintenance procedures, to minimize the emissions of fugitive particulate matter. To minimize means such system shall be installed, maintained and operated to ensure the lowest fugitive particulate matter emissions reasonably achievable.
[45CSR§7-5.1]

3.1.10. **General Fugitive Emissions.** The owner or operator of a plant shall maintain particulate matter control of the plant premises, and plant owned, leased or controlled access roads, by paving, application of asphalt, chemical dust suppressants or other suitable dust control measures. Good operating practices shall be implemented and when necessary particulate matter suppressants shall be applied in relation to stockpiling and general material handling to minimize particulate matter generation and atmospheric entrainment
[45CSR§7-5.2.]

3.1.11 Potential Hazardous Material Emissions--Persons responsible for manufacturing process source operations from which hazardous particulate matter material may be emitted such as, but not limited to, lead, arsenic, beryllium and other such materials shall give the utmost care and consideration to the potential harmful effects of the emissions resulting from such activities. Evaluations of these facilities as to adequacy, efficiency and emission potential will be made on an individual basis by the Director working in conjunction with other appropriate governmental agencies.
[45CSR§7-4.13]

3.1.12. Any stack serving any process source operation or air pollution control equipment on any process source operation shall contain flow straightening devices or a vertical run of sufficient length to establish flow patterns consistent with acceptable stack sampling procedures
[45CSR§7-4.12.]

3.2. Monitoring Requirements

3.2.1. The permittee shall maintain records indicating the use of any dust suppressants or any other suitable dust control measures applied at the facility. The permittee shall also inspect all fugitive dust control systems to ensure that they are operated and maintained in conformance with their designs. The permittee shall maintain records of all scheduled and non-scheduled maintenance and shall state any maintenance or corrective actions taken, the times the fugitive dust control system(s) were inoperable and any corrective actions taken.
[45CSR§30-5.1.c.1.B. and 45CSR13, Permit R13-2058C, (Condition 4.4.6.)]

3.3. Testing Requirements

3.3.1. **Stack testing.** As per provisions set forth in this permit or as otherwise required by the Secretary, in accordance with the West Virginia Code, underlying regulations, permits and orders, the permittee shall conduct test(s) to determine compliance with the emission limitations set forth in this permit and/or established or set forth in underlying documents. The Secretary, or his duly authorized representative, may at his option witness or conduct such test(s). Should the Secretary exercise his option to conduct such test(s), the operator shall provide all necessary sampling connections and sampling ports to be located in such manner as the Secretary may require, power for test equipment and the required safety equipment, such as scaffolding, railings and ladders, to comply with generally accepted good safety practices. Such tests shall be conducted in accordance with the methods and procedures set forth in this permit or as otherwise approved or specified by the Secretary in accordance with the following:

a. The Secretary may on a source-specific basis approve or specify additional testing or alternative testing to the test methods specified in the permit for demonstrating compliance with 40 C.F.R. Parts 60, 61, and 63, if applicable, in accordance with the Secretary's delegated authority and any established equivalency determination methods which are applicable.

b. The Secretary may on a source-specific basis approve or specify additional testing or alternative testing to the test methods specified in the permit for demonstrating compliance with applicable requirements which do not involve federal delegation. In specifying or approving such alternative testing to the test methods, the Secretary, to the extent possible, shall utilize the same equivalency criteria as would be used in approving such changes under Section 3.3.1.a. of this permit.

c. All periodic tests to determine mass emission limits from or air pollutant concentrations in discharge stacks and such other tests as specified in this permit shall be conducted in accordance with an approved test protocol. Unless previously approved, such protocols shall be submitted to the Secretary in writing at least thirty (30) days prior to any testing and shall contain the information set forth by the Secretary. In addition, the permittee shall notify the Secretary at least fifteen (15) days prior to any testing so the Secretary may have the opportunity to observe such tests. This notification shall include the actual date and time during which the test will be conducted and, if appropriate, verification that the tests will fully conform to a referenced protocol previously approved by the Secretary.

[WV Code § 22-5-4(a)(15) and 45CSR13]

3.3.2. **Opacity Demonstration.** Compliance with the opacity standard of 45CSR7 shall be demonstrated by conducting a 40CFR60 Appendix A, Method 22 visible emission test once per month for each stack during periods of operation in which particulate matter is being vented to the emission point being tested. The test report shall document the date and time the test was conducted as well as what operations were being vented during the test. If emission generating equipment does not operate during any given month it shall be documented accordingly.

Directly following any time opacity is identified by the method 22 observation, the permittee is required to conduct a 45CSR7A visible emission (VE) test. If the test fails to meet the 20% opacity requirement of 45CSR§7-3.1 as well as the limited 40% opacity stipulation of 45CSR§7-3.2 and the excess emissions episode does not qualify for a variance under 45CSR§7-9.1, the permittee shall comply with the reporting requirements of 3.5.8. as well as become subject to the following testing, recordkeeping and reporting stipulations:

The permittee shall accelerate the testing frequency to weekly 45CSR7A opacity tests. The emission point(s) of concern shall be required to conduct weekly test for 30 days in order to correct or further define the problem. During this 30 day period the company shall document and maintain all corrective actions taken, any background information, opacity test reports, maintenance records, values of operating parameters being monitored during testing, etc. These documents shall be kept on site and made readily available to the Director upon request. The emission point may resume monthly emission test at the end of the 30 day period if it has demonstrated at least two consecutive weeks in compliance. If the subject emission point cannot meet the criteria for returning to monthly testing within the 30 days, a detailed corrective program shall be submitted to DAQ's Assistant Director of Compliance and Enforcement for approval. The program must include, but may not be limited to a PM stack testing protocol in accordance with 45CSR7A as well as anticipated milestone dates. This corrective program shall be postmarked no later than the 30th day after documenting the initial excess opacity conditions. During times of process excess opacity the permittee shall maintain and operate manufacturing unit(s) including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions.
[45CSR§30-5.1.c.1.B. and 45CSR13, Permit R13-2058C, (Condition 4.3.1.)]

3.4. Recordkeeping Requirements

3.4.1. **Monitoring information.** The permittee shall keep records of monitoring information that include the following:

a. The date, place as defined in this permit and time of sampling or measurements;

b. The date(s) analyses were performed;

c. The company or entity that performed the analyses;

d. The analytical techniques or methods used;

e. The results of the analyses; and

f. The operating conditions existing at the time of sampling or measurement.

[45CSR§30-5.1.c.2.A. and 45CSR13, Permit R13-2058C, (Condition 4.4.1.)]

3.4.2. **Retention of records.** The permittee shall retain records of all required monitoring data and support information for a period of at least five (5) years from the date of monitoring sample, measurement, report, application, or record creation date. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit. Where appropriate, records may be maintained in computerized form in lieu of the above records.
[45CSR§30-5.1.c.2.B.]

3.4.3. **Odors.** For the purposes of 45CSR4, the permittee shall maintain a record of all odor complaints received, any investigation performed in response to such a complaint, and any responsive action(s) taken.
[45CSR§30-5.1.c. State-Enforceable only.]

3.4.4. All test reports required by this permit shall abide with the requirements for retaining records as specified in 3.4.2.
[45CSR§30-5.1.c.2.B.]

3.5. Reporting Requirements

3.5.1. **Responsible official.** Any application form, report, or compliance certification required by this permit to be submitted to the DAQ and/or USEPA shall contain a certification by the responsible official that states that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate and complete.
[45CSR§30-4.4. *and* §30-5.1.c.3.D.]

3.5.2. A permittee may request confidential treatment for the submission of reporting required under 45CSR§30-5.1.c.3. pursuant to the limitations and procedures of W.Va. Code § 22-5-10 and 45CSR31.
[45CSR§30-5.1.c.3.E.]

3.5.3. All notices, requests, demands, submissions and other communications required or permitted to be made to the Secretary of DEP and/or USEPA shall be made in writing and shall be deemed to have been duly given when delivered by hand, mailed first class, or by private carrier with postage prepaid to the address(es) set forth below or to such other person or address as the Secretary of the Department of Environmental Protection may designate:

If to the DAQ:

Director
WVDEP
Division of Air Quality
601 57th Street SE
Charleston, WV 25304

Phone: 304/926-0475
FAX: 304/926-0478

If to the US EPA:

Associate Director
Office of Enforcement and Permits Review
(3AP12)
U. S. Environmental Protection Agency
Region III
1650 Arch Street
Philadelphia, PA 19103-2029

3.5.4. **Certified emissions statement.** The permittee shall submit a certified emissions statement and pay fees on an annual basis in accordance with the submittal requirements of the Division of Air Quality.
[45CSR§30-8.]

3.5.5. **Compliance certification.** The permittee shall certify compliance with the conditions of this permit on the forms provided by the DAQ. In addition to the annual compliance certification, the permittee may be required to submit certifications more frequently under an applicable requirement of this permit. The annual certification shall be submitted to the DAQ and USEPA on or before March 15 of each year, and shall certify compliance for the period ending December 31. The permittee shall maintain a copy of the certification on site for five (5) years from submittal of the certification.
[45CSR§30-5.3.e.]

3.5.6. **Semi-annual monitoring reports.** The permittee shall submit reports of any required monitoring on or before September 15 for the reporting period January 1 to June 30 and on or before March 15 for the reporting period July 1 to December 31. All instances of deviation from permit requirements must be clearly identified in such reports. All required reports must be certified by a responsible official consistent with 45CSR§30-4.4.
[45CSR§30-5.1.c.3.A.]

3.5.7. **Emergencies.** For reporting emergency situations, refer to Section 2.17 of this permit.

3.5.8. **Deviations.**

a. In addition to monitoring reports required by this permit, the permittee shall promptly submit supplemental reports and notices in accordance with the following:

1. Any deviation resulting from an emergency or upset condition, as defined in 45CSR§30-5.7., shall be reported by telephone or telefax within one (1) working day of the date on which the permittee becomes aware of the deviation, if the permittee desires to assert the affirmative defense in accordance with 45CSR§30-5.7. A written report of such deviation, which shall include the probable cause of such deviations, and any corrective actions or preventative measures taken, shall be submitted and certified by a responsible official within ten (10) days of the deviation.

2. Any deviation that poses an imminent and substantial danger to public health, safety, or the environment shall be reported to the Secretary immediately by telephone or telefax. A written report of such deviation, which shall include the probable cause of such deviation, and any corrective actions or preventative measures taken, shall be submitted by the responsible official within ten (10) days of the deviation.

3. Deviations for which more frequent reporting is required under this permit shall be reported on the more frequent basis.

4. All reports of deviations shall identify the probable cause of the deviation and any corrective actions or preventative measures taken.

[45CSR§30-5.1.c.3.C.]

b. The permittee shall, in the reporting of deviations from permit requirements, including those attributable to upset conditions as defined in this permit, report the probable cause of such deviations and any corrective actions or preventive measures taken in accordance with any rules of the Secretary.
[45CSR§30-5.1.c.3.B. and 45CSR13, Permit R13-2058C, (Condition 4.5.1.)]

3.5.9. **New applicable requirements.** If any applicable requirement is promulgated during the term of this permit, the permittee will meet such requirements on a timely basis, or in accordance with a more detailed schedule if required by the applicable requirement.
[45CSR§30-4.3.h.1.B.]

3.6. Compliance Plan

3.6.1. N/A

3.7. Permit Shield

3.7.1. The permittee is hereby granted a permit shield in accordance with 45CSR§30-5.6. The permit shield applies provided the permittee operates in accordance with the information contained within this permit.

3.7.2. The following requirements specifically identified are not applicable to the source based on the determinations set forth below. The permit shield shall apply to the following requirements provided the conditions of the determinations are met.

a. 40CFR60 Subparts K, Ka, Kb —Standards of Performance for Storage Vessels for Petroleum Liquids for Which Construction, Reconstruction, or Modification Commenced After June 11, 1973, and Prior to May 19, 1978; prior to July 23, 1984; or after July 23, 1984 respectively.

Regardless of the construction date these NSPS standards have an applicability threshold of either 40,000 or 20,000 gallons in which UCAR Carbon Company, Inc. does not satisfy. The permittee's largest volatile organic liquid tank is less than 10,000 gallons. Therefore, the above referenced NSPS are not applicable to the following tanks permitted herein:

8,000 gallon, Tectyl 779 Bulk Process Oil Tank, constructed in 1988, Emission Point ID (241)

6,000 gallon, Diesel Fuel Storage Tank, constructed in 1985, Emission Point ID (215)

1,000 gallon, Unleaded Gasoline Fuel Storage Tank, constructed 1985, Emission Point ID (216)

500 gallon, Kerosene Fuel Storage Tank, constructed 1985, Emission Point ID (217)

b. 40CFR60 Subpart Dc—Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units.

UCAR Carbon Company, Inc. operates four boilers having the following characteristics:

Natural Gas Fired Boiler, Constructed in 1981, Rated capacity of 11.0 MMBtu/hr, ID (300)

Natural Gas Fired Boiler, Constructed in 1960, Rated capacity of 8.6 MMBtu/hr, ID (301)

Natural Gas Fired Boiler, Constructed in 1960, Rated capacity of 15.5 MMBtu/hr, ID (308)

Natural Gas Fired Boiler, Constructed in 1960, Rated capacity of 13.0 MMBtu/hr, ID (309)

As a result of these boilers being constructed before the corresponding applicability date of, June 9, 1989 the boilers listed above were found not to be subject to the above referenced NSPS.

c. 40CFR63 Subpart DDDDD–National Emission Standards for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters

UCAR is not a major source of Hazardous Air Pollutants at this time.

UCAR has three (3) gaseous fuel fired boilers that are Large units greater than 10 MMBtu/hr in size

(Emission Unit ID No.s 300, 308, 309)

UCAR filed an “Initial Notification Letter” with the Agency identifying the three (3) Large Units but clarifying that it is not a Major Source of Hazardous Air Pollutants at this time.

4.0. Source-Specific Requirements for Boilers [Emission Point ID(s): 300, 301, 308, and 309]

4.1. Limitations and Standards

4.1.1. No person shall cause, suffer, allow or permit emission of smoke and/ or particulate matter into the open air from any fuel burning unit which is greater than (10) percent opacity based on a six minute block average.

[45CSR§2-3.1.]

4.1.2. Pursuant to 45CSR2, Section 4.1., the type 'b' fuel burning units emission points ID 300, 308, and 309 shall not exceed 0.99, 1.36, and 1.17 (lb/hr) particulate matter respectively.

[45CSR§2-4.1.b., Emission Point ID (300, 308, 309)]

4.1.3. Pursuant to 45CSR10, Section 3, the emissions of SO2 from emission points ID 300, 308, and 309 shall not exceed 35.2, 49.6, and 41.6 (lb/hr) respectively.

[45CSR§10-3.3.f., Emission Point ID (300, 308, 309)]

4.2. Monitoring Requirements

4.2.1. Compliance with the PM and SO2 emission limitations, 4.1.2 and 4.1.3 shall be demonstrated by utilizing only pipeline quality natural gas as boiler fuel.

[45CSR§30-12.7, Emission Point ID (300, 308, 309)]

4.3. Testing Requirements

4.3.1. At such reasonable times as the Director may designate, the owner or operator of any fuel burning unit(s) may be required to conduct or have conducted tests to determine the compliance of such unit(s) with the emission limitations of 4.1.2. Such tests shall be conducted in accordance with the appropriate method set forth in the Appendix to this rule or other equivalent EPA approved method approved by the Director. The Director, or his duly authorized representative, may at his option witness or conduct such tests. Should the Director exercise his option to conduct such tests, the operator will provide all necessary sampling connections and sampling ports located in such manner as the Director may require, power for test equipment, and the required safety equipment such as scaffolding, railings and ladders to comply with generally accepted good safety practices

[45CSR§2-8.1.b., Emission Point ID (300, 308, 309)]

4.3.2. The Director, or his duly authorized representative, may conduct such other tests as he may deem necessary to evaluate air pollution emissions other than those noted in 4.1.2.

[45CSR§2-8.1.c., Emission Point ID (300, 308, 309)]

4.4. Recordkeeping Requirements

4.4.1. The owner or operator shall maintain records of the boiler's operating log. Additionally the permittee shall also maintain records of the quality and quantity of fuel consumed in each fuel burning unit on a annual basis. Verification of pipeline quality natural gas satisfies the gas quality requirement. Such records are to be maintained on-site and made available to the Director or his duly authorized representative upon request.

[45CSR§2-8.3.c., Emission Point ID (300, 308, 309)]

4.5. Reporting Requirements

4.5.1. N/A

5.0. Source-Specific Requirements for the Bake Process [Emission Point ID(s): 036, 037, 038, 039, 040, 042, 043, 044, 045, 046, 047, 048, 049, 082, 083, 084, 078, 080, 081, 251-257, 213, 214]

5.1. Limitations and Standards

5.1.1. The maximum allowable emissions to the atmosphere from the heat treat oven, carbottom furnaces, incinerators, cooling stacks, associated pack handling system, and surface preparation equipment are not to exceed the limitations set forth in ATTACHMENT A.

The PM emission limitations for each source listed in Attachment A streamlines and assures compliance with 45CSR§7-4.1.

[45CSR13, Permit R13-2058C, (Condition 4.1.6.), Emission Point ID (082, 083, 084, 251, 252, 253, 254, 255, 256, 257, 078, 080, 081)]

5.1.2. Maximum process throughput shall not exceed 2,800,000 pounds per year of carbonaceous first bake product and 3,727,650 pounds per year of first bake product receiving rebake processing.

[45CSR13, Permit R13-2058C, (Condition 4.1.12.), Equipment ID (CBF-078, 080, 081)]

5.1.3. Each of the incinerators is required to be in operation at all times when servicing one or more furnaces operating at temperatures between 250°C and 500°C. The maximum number of furnaces within the specified temperature (250°C to 500°C) range drafting to one (1) incinerator is not to exceed three (3) at any one time. Heat treat ovens (094, 095) may vent to the incinerators during the operation of a maximum of three (3) of the carbottom furnaces as stated above.

[45CSR13, Permit R13-2058C, (Condition 4.1.13.), Equipment ID (CBF-078, 080, 081)]

5.1.4. Sulfur content of the pitch shall not exceed the following rolling yearly average amounts:

- 1.5% sulfur content for **coal tar pitch** used in the first bake furnace
- 3.0% sulfur content for **petroleum based pitch** used in the rebake furnace

A rolling yearly average shall mean the average sulfur content at any given time for the previous twelve (12) consecutive calender months. The rolling yearly average amounts of sulfur content are to be based upon annual raw material monitoring data.

Compliance with this Requirement will demonstrate compliance with sulfur dioxide concentration limit per

45CSR§10-4.1. and 45CSR13 Permit R13-2058C Condition 4.1.10.

[45CSR§30-5 .1. and 45CSR13 Permit R13-2058C, (Condition 4.1.14.), Equipment ID (044, 045, CBF-078, 080, 081)]

5.1.5. The operation of the pack handling system shall not exceed three saggers loaded/unloaded per hour or 11,652 saggers per year with a maximum throughput of 20 tons per hour or 30,494 tons per year of pack material.

[45CSR13, Permit R13-2058C, (Condition 4.1.15.), Emission Point ID (082, 083, 084)]

5.1.6. Natural gas will be used to fire each of the seven furnaces with the maximum heat input to each furnace not to exceed 2.1 million Btu/hr. This heat input rate is equivalent to a gas flow rate of 2100 ft^3/hr.

[45CSR13, Permit R13-2058C, (Condition 4.1.16.), Equipment ID (080L, 080M, 080N, 081A, 081B, 081C, 081D)]

5.1.7. The maximum heat input for the firing of each of the natural gas fueled burners during cooling shall not exceed 1.0 million BTU per hour. The heat input rate is equivalent to a gas flow rate of 1000 ft^3/hr.

[45CSR13, Permit R13-2058C, (Condition 4.1.17.), Equipment ID (NC251, NC252, NC253, NC254, NC255, NC256, NC257)]

5.1.8. The maximum heat input for the firing of each natural gas fired incinerator (078, 080, 081) shall not exceed 3.5 million BTU per hour. This heat input rate is equivalent to a gas flow rate of 3,500 ft^3/hr.

[45CSR13, Permit R13-2058C, (Condition 4.1.18.), Equipment ID (078, 080, 081)]

5.1.9. The maximum heat input for the firing of the natural gas fired heat treat oven (094, 095) shall not exceed 1.0 million BTU per hour. This heat input rate is equivalent to a gas flow rate of 1000 ft^3/hr.

[45CSR13, Permit R13-2058C, (Condition 4.1.19.), Equipment ID (094, 095)]

5.1.10. Maximum throughput of AMW assembly production shall not exceed 50 assemblies per 12 hour cycle. The maximum allowable payload of Pre-Preg Carbon Paper shall not exceed 164 lb/cycle.

[45CSR13, Permit R13-2058C, (Condition 4.1.20.), Equipment ID (094, 095)]

5.1.11. Maximum throughput of AMW assembly production to the carbottom furnaces (080L, 080M, 080N) shall not exceed 266 AMW assemblies per 30 hour cycle and 37,500 AMW assemblies per year.

[45CSR13, Permit R13-2058C, (Condition 4.1.21.), Equipment ID (080L, 080M, 080N)]

5.1.12. Maximum throughput of C-34 cement to each of the heat treatment ovens (094, 095) shall not exceed 380 pounds of cement in a 12 hour cycle.

[45CSR13, Permit R13-2058C, (Condition 4.1.22.), Equipment ID (094, 095)]

5.1.13. Maximum yearly throughput of C-34 cement to each of the heat treatment ovens (094, 095) and the carbottom furnaces (080L, 080M, 080N) shall not exceed 337,500 pounds of cement per year.

[45CSR13, Permit R13-2058C, (Condition 4.1.24), Equipment ID (080L, 080M, 080N, 094, 095)]

5.1.14. Maximum throughput of of HHN cement to each of the heat treatment ovens (094, 095) shall not exceed 380 pounds of cement in a 12 hour cycle.

[45CSR13, Permit R13-2058C, (Condition 4.1.25.), Equipment ID (094, 095)]

5.1.15. Maximum throughput of C-34 cement to each of the carbottom furnaces (080L, 080M, 080N) shall not exceed 4,788 pounds of cement in a 30 hour cycle.

[45CSR13, Permit R13-2058C, (Condition 4.1.23.), Equipment ID (080L, 080M, 080N)]

5.1.16. Maximum throughput of HHN cement to each of the carbottom furnaces(080L, 080M, 080N) shall not exceed 4,788 pounds of cement in 30 hour cycle.

[45CSR13, Permit R13-2058C, (Condition 4.1.26.), Equipment ID ((080L, 080M, 080N)]

5.1.17. Maximum yearly throughput of HHN cement to each of the heat treatment ovens (094, 095) and the carbottom furnaces (080L, 080M, 080N) shall not exceed 337,500 pounds of cement per year.

[45CSR13, Permit R13-2058C, (Condition 4.1.27), Equipment ID (080L, 080M, 080N, 094, 095)]

5.1.18. Maximum throughput of cement to the heat treatment ovens (094, 095) shall not exceed 380 pounds of in a 12 hour cycle for the AMW assembly wraps.

[45CSR13, Permit R13-2058C, (Condition 4.1.28.), Equipment ID (094, 095)]

5.1.19. Maximum yearly throughput of cement to each of the heat treatment ovens (094, 095) and the carbottom furnaces (080L, 080M, 080N) shall not exceed 22,800 pounds of cement per year for the AMW assembly wraps.

[45CSR13, Permit R13-2058C, (Condition 4.1.30), Equipment ID (080L, 080M, 080N, 094, 095)]

5.1.20. Maximum throughput of cement to the carbottom furnaces (080L, 080M, 080N) shall not exceed 1,520 pounds of cement per furnace in a 30 hour cycle for the AMW assembly wraps.

[45CSR13, Permit R13-2058C, (Condition 4.1.29.), Equipment ID (080L, 080M, 080N)]

5.1.21. Maximum processing of Carbon Foam Blocks processed in the carbottom furnaces (080L, 080M, 080N) shall not exceed 294 pieces per 24 day cycle and 4,410 pieces per year.

[45CSR13, Permit R13-2058C, (Condition 4.1.32.), Equipment ID (080L, 080M, 080N)]

5.1.22. Use of any new ingredient(s)/material(s) containing any constituent identified in Section 112(b) of the 1990 Clean Air Act Amendments as a HAP, shall be treated in accordance with the following:

a. The permittee shall notify the Director in writing, via a permit determination, of any new ingredient(s) to be used and the HAP(s) contained therein within thirty (30) days of the initial use of the ingredient Additionally, an MSDS sheet for each of the new ingredient(s) shall be supplied at this time to the Director.

b. An estimate of emissions associated with the use of the new ingredient(s) shall be determined and incorporated into the record keeping requirements contained herein.

[45CSR13, Permit R13-2058C, (Condition 4.1.33.)]

5.1.23. With respect to the surface cleaning of carbonaceous product, pack handling and dispensing, pit baking and operation of the car bottom furnaces the permittee shall not cause, suffer, allow or permit particulate matter (PM) to be vented into the open air from any type source operation or duplicate source operation, or from all air pollution control equipment installed on any type source operation or duplicate source operation in excess of the quantity defined by Table 45-7A and summarized in the following table:

Emission Point (I.D.)	Equipment Description	Emission Limitation, PM (lb/hr)
036	Duplex Mill Baghouse	0.288
037	Vertical Mill Baghouse	10.0
038	Lathe Baghouse	28.0
039	Shot Blast Feed Rail Baghouse	32.2
040	Shot Blast Main Unit Baghouse	32.2
042	Building 29 Floor Dump, Etc. Baghouse	28
043	Bucket Elevator/Hummer Baghouse	28
044	Pit Bake Furnaces Building 30	5.2
045	Pit Bake Furnaces Building 29	5.2
046	Airveyor Receiver, Etc. Baghouse	32.2
047	Sand Dump/ Hopper Fill Sation, Etc. Baghouse	32.2
048	Pack Dispensing Station Hopper, Etc. Baghouse	32.2
049	Power Bin Vent/ Bulk Sand Storage Silo Baghouse	32.2

[45CSR§7-4.1, Emission Point ID (036, 037, 038, 039, 040, 042, 043, 046, 047, 048, 049, and 044, 045)]

5.1.24. No person shall cause, suffer, allow or permit emission of smoke and/or particulate matter into the open air from any process source operation which is greater than twenty (20) percent opacity, except as noted in subsections 3.2, 3.3, 3.4, 3.5, 3.6, and 3.7 of 45CSR7.

[45CSR§7-3.1., 45CSR13, Permit R13-2058C, (Condition 4.1.4.), Emission Point ID (036, 037, 038, 039, 040, 042, 043, 046, 047, 048, 049, 082, 083, 084, 251-257, 044, 045, 078, 080, 081, 213, 214)]

5.1.25. The provisions of 5.1.24. above shall not apply to smoke and/or particulate matter emitted from any process source operation which is less than forty (40) percent opacity for any period or periods aggregating no more than five (5) minutes in any sixty (60) minute period.

[45CSR§7-3.2, 45CSR13, Permit R13-2058C, (Condition 4.1.5.), Emission Point ID (036, 037, 038, 039, 040, 042, 043, 046, 047, 048, 049, 082, 083, 084, 044, 045, 078, 080, 081, 251-257, 213, 214)]

5.1.26. Various bars and equipment coated with residual pitch shall be cleaned in the #5 National Pit Baking Furnaces while utilizing flue gas recirculation. These operations shall be documented in accordance with 5.4.3.

[45CSR§30-12.7, Emission Point ID (044, 045)]

5.1.27. Residual pitch from ESP cleaning shall be added to the sand packing material and combusted in the #5 National pit Bake Furnaces while incorporating flue gas recirculation. The amount of pitch added to the sand packing shall be tracked in accordance with 5.4.3.

[45CSR§30-12.7, Emission Point ID (044, 045)]

5.1.28. The maximum amount of pre-coat applied to the graphite shapes in the heat treat ovens (094, 095) shall not exceed 130 pounds of binder system per furnace in a 14 hour cycle.

[45CSR13, Permit R13-2058C, (Condition 4.1.31), Equipment ID (094, 095)]

5.1.29. In the event the graphite shapes do not fit in the heat treat ovens (094, 095), Furnaces 078A, 080L, 080M, 080N may be used to cure the shapes, provided the amount of pre-coat applied doesn't exceed the limit in Requirement 5.1.28.

[45CSR§30-12.7, Equipment ID (078A, 080L, 080M, 080N)]

5.1.30. No person shall cause, suffer, allow or permit particulate matter to be discharged from any incinerator into the open air in excess of the quantity determined by use of the following formula:

Emissions (lb/hr) = F x Incinerator Capacity (tons/hr)

Where, the factor, F, is as indicated in Table I below:

Table I: Factor, F, for Determining Maximum Allowable Particulate Emissions

Incinerator Capacity	Factor F
A. Less than 15,000 lbs/hr	5.43
B. 15,000 lbs/hr or greater	2.72

The PM emission limitations for each source (078, 080, 081) subject to the requirements of 45CSR6 listed in Attachment A streamlines and assures compliance with 45CSR§6-4.1.

[45CSR13, Permit R13-2058C, (Condition 4.1.1.) and 45CSR§6-4.1., Equipment Point ID (078, 080, 081)]

5.1.31. Emission of Visible Particulate Matter --No person shall cause, suffer, allow or permit emission of smoke into the atmosphere from any incinerator which is twenty (20%) percent opacity or greater.
[45CSR13, Permit R13-2058C, (Condition 4.1.2) and 45CSR§6-4.3., Equipment Point ID (078, 080, 081)

5.1.32. Incinerators, including all associated equipment and grounds, shall be designed, operated and maintained so as to prevent the emission of objectionable odors.

[45CSR13, Permit R13-2058C, (Condition 4.1.3) and 45CSR§6-4.6., Equipment ID (078, 080, 081)]

5.1.33. Any stack serving any process source operation or air pollution control equipment on any process source operation shall contain flow straightening devices or a vertical run of sufficient length to establish flow patterns consistent with acceptable stack sampling procedures

[45CSR§7-4.12. and 45CSR13, Permit R13-2058C, (Condition 4.1.7), Equipment ID (082, 083, 084, 251, 252, 253, 254, 255, 256, 257, 078, 080, 081, 094, 095)]

5.1.34. No person shall cause, suffer, allow or permit any manufacturing process or storage structure generating fugitive particulate matter to operate that is not equipped with a system, which may include, but not be limited to, process equipment design, control equipment design or operation and maintenance procedures, to minimize the emissions of fugitive particulate matter. To minimize means such system shall be installed, maintained and operated to ensure the lowest fugitive particulate matter emissions reasonably achievable.

[45CSR§7-5.1. and 45CSR13, Permit R13-2058C, (Condition 4.1.8), Emission Point ID (036, 037, 038, 039, 040, 042, 043, 044, 045, 046, 047, 048, 049, 078, 080, 081, 082, 083, 084, 251-257)]

5.1.35. The owner or operator of a plant shall maintain particulate matter control of the plant premises, and plant owned, leased or controlled access roads, by paving, application of asphalt, chemical dust suppressants or other suitable dust control measures. Good operating practices shall be implemented and when necessary particulate matter suppressants shall be applied in relation to stockpiling and general material handling to minimize particulate matter generation and atmospheric entrainment.

[45CSR§7-5.2. and 45CSR13, Permit R13-2058C, (Condition 4.1.9.)]

5.1.36. **Operation and Maintenance of Air Pollution Control Equipment.** The permittee shall, to the extent practicable, install, maintain, and operate all pollution control equipment listed in Section 1.0 and associated monitoring equipment in a manner consistent with safety and good air pollution control practices for minimizing emissions, or comply with any more stringent limits set forth in this permit or as set forth by any State rule, Federal regulation, or alternative control plan approved by the Secretary.

[45CSR13, Permit R13-2058C, (Condition 4.1.34) and 45CSR§13-5.11., Equipment ID (078, 080, 081,082)]

5.2. Monitoring Requirements

5.2.1. For the purpose of determining compliance with the limits established in 5.1.1 through 5.1.22 and 5.1.28, the following information shall be maintained on-site for a period of no less than five (5) years and shall be certified and made available to the Director or his duly authorized representative upon request:

- Amount of carbonaceous product throughput for both first bake and rebake processing.
- Sulfur content of pitch used for first bake and rebake furnaces, in addition to raw material monitoring data
- Number of saggers loaded per year of operation of the pack handling system.
- Amount of pack handling material processed
- Amount of energy/fuel used for the firing of each of the natural gas furnaces
- Amount of energy/fuel used for the firing of each of the burners used for intermittent cooling of the furnaces
- Amount of energy/fuel used for the firing of each of the incinerators
- Amount of energy/fuel used for firing of the heat treat oven (094, 095).
- Actual weight per piece and per size of Pre-Preg Paper fed to the heat treat oven (094, 095).
- Amount of Pre-Preg Paper, AMW Boards and Carbon Foam Blocks processed in the heat treat oven (094, 095) and the carbottom furnaces (080L,080M,080N).
- Type and amount of carbonaceous cement and binder system applied to furnace load fed to the heat treat oven (094, 095) and the carbottom furnaces (080L, 080M, 080N).

[45CSR13, Permit R13-2058C, (Condition 4.2.1.), Equipment ID (082, 083, 084, 251-257, 078, 080, 080L, 080M, 080N, 081, 094, 095)]

5.2.2. The permittee shall conduct an annual preventative maintenance inspection, cleaning, replacement, and refurbishment as appropriate, of all bags, bag connections, and dust hoppers of the baghouses pertaining to all emission points subject to 45CSR7 in order to ensure proper operation of the filters. Records shall be maintained on site for a period of no less than five (5) years stating the date and time of each baghouse's annual preventative maintenance activity, the results of the annual preventative maintenance activity and, if applicable, all corrective actions taken. These records shall also reflect any routine maintenance conducted in addition to the preventative maintenance activities specified above.

[45CSR§30-5.1.c.1.B. and 45CSR13, Permit R13-2058C, (Condition 4.2.2)]

5.2.3. In order to assure compliance with the PM emission limits established by 5.1.23 the #5 National Pit Bake Furnaces corresponding to emission points (044 and 045) the permittee shall operate in accordance with the following work practice standards:

a.) The exhaust gas from any furnace in volatile service shall not be sent to the atmosphere without first passing through another furnace operating at or above the temperature, which has been demonstrated as best work practices by UCAR, typically > 575 degrees C. These best work practices are further defined within standard operating procedures (SOP) entitled "Bake Firing - #5 National Pit Baking Furnaces" submitted as supplemental information to the Title V Application.

[45CSR§30-5.1.c.1.B.]

5.2.4. In order to assure compliance with rolling yearly average sulfur content limits set forth in Requirement 5.1.4., the permittee shall monitor sulfur content of every shipment of coal tar pitch and petroleum based pitch, and maintain records of 12-month rolling average amounts for each pitch type.

[45CSR§30-5.1.c.1.B., Emission Points (044, 045, 078, 080, 081)]

5.3. Testing Requirements

5.3.1. At such reasonable times as the Director may designate the operator of any manufacturing process source operation may be required to conduct or have conducted stack tests to determine the particulate matter loading in exhaust gases when the Director has reason to believe that the stack emission limitations(s) is/are being violated. Such tests shall be conducted in such manner as the Director may specify and be filed on forms and in a manner acceptable to the Director. The Director, or his duly authorized representative, may at his option witness or conduct such stack tests. Should the Director exercise his option to conduct such tests, the operator will provide all the necessary sampling connections and sampling ports to be located in such manner as the Director may require, power for test equipment, and the required safety equipment such as scaffolding, railings, and ladders to comply with generally accepted good safety practices.

[45CSR13, Permit R13-2058C, (Condition 4.3.2.), Equipment ID (082, 083, 084, 251, 252, 253, 254, 255, 256, 257, 078, 080, 081, 094, 095)]

5.3.2. Compliance with the opacity standard, 5.1.24. and 5.1.31., shall be demonstrated by conducting a 40CFR60 Appendix A, Method 22 visible emission tests as specified by 3.3.2 of this permit.

[45CSR§30-5.1.c.B.1. and 45CSR13, Permit R13-2058C, (Condition 4.3.3.)]

5.4. Recordkeeping Requirements

5.4.1 A record of each visible emission check required by 5.3.2. above. These record shall include, but not be limited to, the date, time, name of emission unit, the applicable visible emissions requirements, the results of the check, what action(s), if any, was/were taken, and the name of the observer.

[45CSR§30-5.1.c. and 45CSR13, Permit R13-2058C, (Condition 4.4.4.)]

5.4.2. The permittee shall maintain records quantifying the amount of material collected by air pollution control equipment in order to estimate actual emissions based on manufacturer's guaranteed control efficiency. This estimate of actual emissions shall serve to demonstrate compliance with the PM emission limits of 5.1.23 and 5.1.1. of this permit.

[45CSR§30-5.1.c.1.B. and 45CSR13, Permit R13-2058C, (Condition 4.4.5.), Emission Point ID(s) (082, 036, 037, 038, 039, 040, 042, 043, 046, 047, 048, 049)]

5.4.3. Records shall be maintained to document the number of support bars and cages cleaned in order to estimate the (lbs) of residual pitch added to the pit bake furnaces. Additionally the amount of residual pitch removed from ESP cleaning (ID 41A, and 41B) and burned in the #5 national pit baking furnaces shall be documented on a monthly basis.

[45CSR§30-12.7, Emission Point ID(s) (044, 045)]

5.4.4. The permittee shall conduct an annual preventative maintenance inspection, cleaning, replacement, and refurbishment as appropriate, of all bags, bag connections, and dust hoppers of the baghouses pertaining to all emission points subject to 45CSR7 in order to ensure proper operation of the filters. Records shall be maintained on site for a period of no less than five (5) years stating the date and time of each baghouse's annual preventative maintenance activity, the results of the annual preventative maintenance activity and, if applicable, all corrective actions taken. These records shall also reflect any routine maintenance conducted in addition to the preventative maintenance activities specified above.

[45CSR13, Permit R13-2058C, (Condition 4.4.7.)]

5.4.5. **Record of Maintenance of Air Pollution Control Equipment.** For all pollution control equipment listed in Section 1.0, the permittee shall maintain accurate records of all required pollution control equipment inspection and/or preventative maintenance procedures.

[45CSR13, Permit R13-2058C, (Condition 4.4.2.), Equipment ID (078, 080, 081,082)]

5.4.6. **Record of Malfunctions of Air Pollution Control Equipment.** For all air pollution control equipment listed in Section 1.0, the permittee shall maintain records of the occurrence and duration of any malfunction or operational shutdown of the air pollution control equipment during which excess emissions occur. For each such case, the following information shall be recorded:

a. The equipment involved.

b. Steps taken to minimize emissions during the event.

c. The duration of the event.

d. The estimated increase in emissions during the event.

For each such case associated with an equipment malfunction, the additional information shall also be recorded:

e. The cause of the malfunction.

f. Steps taken to correct the malfunction.

g. Any changes or modifications to equipment or procedures that would help prevent future recurrences of the malfunction.

[45CSR13, Permit R13-2058C, (Condition 4.4.3.), Equipment ID (078, 080, 081,082)]

5.5. Reporting Requirements

5.5.1. Due to unavoidable malfunction of equipment, emissions exceeding those set forth in 45CSR7 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the malfunction. In cases of major equipment failure additional time periods may be granted by the Director provided a corrective program has been submitted by the owner or operator and approved by the Director.

[45CSR§7-9.1. and 45CSR13, Permit R13-2058C, (Condition 4.5.2.)]

6.0. Source-Specific Requirements for the Pitch Impregnation Process, [Emission Point ID(s) 040, 041, 302, 303, 304, 320]

6.1. Limitations and Standards

6.1.1. No person shall cause, suffer, allow or permit emission of smoke and/or particulate matter into the open air from any process source operation which is greater than twenty (20) percent opacity, except as noted in subsections 3.2, 3.3, 3.4, 3.5, 3.6, and 3.7 of 45CSR7.

[45CSR§7-3.1., Emission Point ID (041, 302, 303, 304, 320)]

6.1.2. No person shall cause, suffer, allow or permit particulate matter (PM) to be vented into the open air from any type source operation or duplicate source operation, or from all air pollution control equipment installed on any type source operation or duplicate source operation in excess of the quantity specified in Table 45-7A and summarized in the following table:

Emission Point (I.D.)	Equipment Description	Emission Limitation (lb/hr)
040	17,800 CFM Baghouse	32.2
041	Pitch Impregnation (PI) Autoclave ESP 1 or 2	3
302	PI Preheater	16
303	PI Preheater	16
304	PI Preheater	16
320	PI Preheater	16

[45CSR§7-4.1., Emission Point ID (040, 041, 302, 303, 304, 320)]

6.1.3. The provisions of 6.1.1, above shall not apply to smoke and/or particulate matter emitted from any process source operation which is less than forty (40) percent opacity for any period or periods aggregating no more than five (5) minutes in any sixty (60) minute period.

[45CSR§7-3.2, Emission Point ID (041, 302, 303, 304, 320)]

6.1.4. No person shall cause, suffer, allow or permit the emission into the open air from any source operation an in-stack sulfur dioxide concentration exceeding 2,000 parts per million by volume from existing source operations.

[45CSR§10-4.1, Emission Point ID (302, 303, 304, 320)]

6.1.5. The electrostatic precipitators (ESP), corresponding to equipment IDS 041A and 041B, shall have at least 2 of the 3 - 12 cell banks in operation at all times the pitch impregnation autoclave ID 041C or its ancillary equipment are in use. Compliance with this limitation shall be documented in accordance with 6.2.4.

[45CSR§30-5.1.c.1.B., Emission Point ID (041)]

6.2. Monitoring Requirements

6.2.1. The permittee shall maintain a log of pitch impregnation batches run on PI autoclave ID 041C.

[45CSR§30-5.1.c.1.B., Equipment ID (041C)]

6.2.2. In order to demonstrate compliance with the PM and SO2 emission limitations established for the pre-heaters within 6.1.2 and 6.1.4, the permittee shall maintain a log of natural gas usage for these heaters, which also verifies that pipeline quality natural gas is the only fuel combusted by the heaters.

[45CSR§30-5.1.c.1.B., Equipment ID (302A, 303A, 304A, 320A)]

6.2.3. In order to demonstrate compliance with Standard 6.1.5 the permittee shall maintain a log of ESP operations.

This log shall include, but not be limited to the following:

1) The ESP ID and number of cell banks in operation during each cycle,

2) Additionally any maintenance activities performed on the ESPs, that are considered routine standard operating procedures (SOP) shall also be documented. The SOP referenced here is entitled "#5 National Furnace Fire Controller (PI)" and was submitted as supplemental information to the Title V Application.

[45CSR§30-5.1.c.1.B., Equipment ID (041A, 041B, 041C, 041D, 041E)]

6.2.4. In order to assure compliance with the 3 lb/hr PM limit established by 6.1.2, ESP IDS (041A-B) shall monitor and record the secondary voltage and current to determine the power being utilized at least once before the start of each impregnation batch. In the event the parametric monitoring described above results in a power measurement outside the best work practice ranges established below, the permittee shall document it as an deviation in accordance with 6.4.4. Deviations are not necessarily a determination of noncompliance with the emission limit of 6.1.2., however each deviation shall trigger an inspection of the control equipment in addition to the requirements of 6.4.4.

Ionizer Voltage 10-14 kV DC

Current 1-36 mA

[45CSR§30-5.1.c.1.B., Equipment ID (041A, 041B)]

6.3. Testing Requirements

6.3.1. Compliance with the opacity standard, 6.1.1., shall be demonstrated by conducting a 40CFR60 Appendix A, Method 22 visible emission tests in accordance with the methods and schedule specified by 3.3.2 of this permit.

[45CSR§30-5.1.c.B.1.]

6.4. Recordkeeping Requirements

6.4.1. The records corresponding to opacity testing outlined in 6.3.1, above shall be maintained and kept up to date for all emission points subject to the opacity limitations of 45CSR7 and thus 6.1.1, of this permit.

[45CSR§30-5.1.c.B.1.]

6.4.2. Records of all monitoring required within section 6.2, shall be maintained and kept up to date. These records shall be made available and certified by a "responsible official" upon request of the Director or a duly authorized representative.

[45CSR§30-5.1.c.1.B.]

6.4.3. The reporting requirements of Section 5.4.2 of this permit also apply for the Pitch Impregnation Process.

6.5. Reporting Requirements

6.5.1. Due to unavoidable malfunction of equipment, emissions exceeding those set forth in 45CSR7 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the malfunction. In cases of major equipment failure additional time periods may be granted by the Director provided a corrective program has been submitted by the owner or operator and approved by the Director.

[45CSR§7-9.1.]

7.0. Source-Specific Requirements for the Special Products, Emission Point ID(s)[222, 224, 225, 223, 307, 306, 320, 055, 079]

7.1. Limitations and Standards

7.1.1. Maximum process weight rate shall not exceed 30,000 pounds per load or 833 pounds per hour of graphite.

[45CSR13, Permit Number, R13-1151, (Condition A.1) Equipment ID (307)]

7.1.2. Maximum emission rate shall not exceed 0.1 pounds per hour of HCL

[45CSR13, Permit Number, R13-1151, (Condition A.2.), Emission Point ID (307)]

7.1.3. Emissions to the atmosphere from the **Rigid Graphite Insulation Process** shall not exceed the following hourly and annual limits:

Emission Point ID	Equipment Name	Pollutant	Maximum Emission Rates	
			(lb/hr)	(lb/yr)
055 or 079	Induction Furnace (1) (ID: 055E, 055F, 055G, 079A)	PM	0.3	500
		VOC	1.7	1,313
306	Walk-in Cure Furnace (Equipment ID: 306-A)	CO	0.4	1,600
		NO_x	0.1	400
		PM	0.1	400
		SO_2	0.05	200
		VOC (Natural Gas Combustion)	0.1	97
		VOC (GRI Coating)	1.26	590
		Total Hydrocarbons	1.36	683

(1) The emission limits applied to the electrical heating induction furnaces are associated with the heat treating/processing of Graphite Rigid Insulation. Furnace operations associated with the purification process, involving chlorine injection, have permitted emission limits as per R13-1934B.

This requirement streamlines compliance with the PM limitation specified by 7.1.9 of this permit

[45CSR13, Permit Number, R13-1540B, (Condition 4.1.2.), Emission Point IDS (306, 055, 079)]

7.1.4. Emissions to the atmosphere from the **Porous Carbon Baking Process** shall not exceed the following hourly and annual limits:

Emission Point ID:	Equipment Name	Equipment ID:	Pollutant	Maximum Hourly Emissions (lb/hr)	Maximum Annual Emissions (lb/yr)
306	Cure Oven	306A	CO	0.4	2,600
			NO_x	0.1	650
			PM	0.1	650
			SO_2	0.05	325
			VOC	15	22,893(1)
055, 079	Induction Furnace	055A,055B, 055C,055D, 055E, 055F, 055G, & 079A	PM	0.1	25

Note: (1) Maximum hourly and annual hydrocarbon (VOC) emissions were shown in permit R13-1569 as originating from the # 5 National Pit Bake Furnaces at a rate of 123,516 lb/yr, and from the cure oven at 10,000 lb/yr. The actual emission rate will be 22,893 lb/yr (or 11.446 ton/yr) for VOC/total hydrocarbons. Car bottom bake furnaces will emit a maximum of 288 lb/yr of VOCs which is part of the allowable emissions contained in permit R13-2058A.

(2) Emission points 055 and 079 are scrubber exhaust vents, which have emission limits permitted under existing permit R13-1934B.

This requirement streamlines compliance with the PM limitation specified by 7.1.9 of this permit

[45CSR13, Permit Number, R13-1569A, (Condition A.1.), Equipment ID (306, 055, 079)]

7.1.5. For the "B" Bake Cycle, the Benco Pre-heater (EP#320) shall be operated with an inert atmosphere of nitrogen to prevent oxidation so that there are no particulate emissions associated with the processing of Graphite Rigid Insulation. This requirement streamlines compliance with the PM limitation specified by 7.1.9 of this permit

[45CSR13, Permit Number, R13-1540B, (Condition 4.1.1.), Emission Point IDS (320)]

7.1.6. The production rate for the **Porous Carbon** product line shall not exceed 22.1 tons per month, or 265 tons per year. The annual production limit shall be based on a rolling yearly total. A rolling yearly total shall mean the total production of Porous Carbon product at any given time for the previous twelve (12) consecutive calendar months.

[45CSR13, Permit Number, R13-1569A, (Condition A.2.), Equipment ID (NEP-406-H)]

7.1.7. No person shall cause, suffer, allow or permit emission of smoke and/or particulate matter into the open air from any process source operation which is greater than twenty (20) percent opacity, except as noted in subsections 3.2, 3.3, 3.4, 3.5, 3.6, and 3.7 of 45CSR7.

[45CSR§7-3.1]

7.1.8. The provisions of 7.1.7 above shall not apply to smoke and/or particulate matter emitted from any process source operation which is less than forty (40) percent opacity for any period or periods aggregating no more than five (5) minutes in any sixty (60) minute period.

[45CSR§7-3.2]

7.1.9. No person shall cause, suffer, allow or permit particulate matter (PM) to be vented into the open air from any type source operation or duplicate source operation, or from all air pollution control equipment installed on any type source operation or duplicate source operation in excess of the quantity specified in Table 45-7A and summarized in the following table:

Emission Point (I.D.)	Equipment Description	Emission Limitation PM(lb/hr)
222	T-143 Autoclave Vac. Pump	4.2
224	T-143 Autoclave Vent to Atm.	4.2
225	Portable Exhaust Fan for T-143 Autoclave	4.2
223	T-157 Autoclave Vent	4.2
307	Cure Oven	1.0

[45CSR§7-4.1.]

7.1.10. No person shall cause, suffer, allow or permit the emission into the open air from any source operation an in-stack sulfur dioxide concentration exceeding 2,000 parts per million by volume from existing source operations.

[45CSR§10-4.1, Emission Point ID (306, 307, 320)]

7.1.11. The maximum amount of pre-coat applied to the graphite shapes in the heat treat oven 306A shall not exceed 130 pounds of binder system in a 14 hour cycle.

[45CSR13, Permit R13-2058C, (Condition 4.1.31), Equipment ID (306A)]

7.2. Monitoring Requirements

7.2.1. The permittee shall conduct an **annual** preventative maintenance inspection, cleaning, replacement, and refurbishment as appropriate, of all bags, bag connections, and dust hoppers of the baghouses pertaining to all emission points subject to 45CSR7 in order to ensure proper operation of the filters. Records shall be maintained on site for a period of no less than five (5) years stating the date and time of each baghouse's annual preventative maintenance activity, the results of the annual preventative maintenance activity and, if applicable, all corrective actions taken. These records shall also reflect any routine maintenance conducted in addition to the preventative maintenance activities specified above.

[45CSR§30-5.1.c.1.B.]

7.2.2. Compliance with the 2,000 ppm sulfur dioxide limitation specified by 7.1.10 shall be satisfied by maintaining records of the amount of natural gas combusted as well as verification that pipeline quality natural gas is the only fuel combusted within these ovens.

[45CSR§30-5.1.c.1.B., Emission Point ID (306, 307, 320)]

7.2.3. For the purpose of determining compliance with the limits established in 7.1.11, the following information shall be maintained on-site for a period of no less than five (5) years and shall be certified and made available to the Director or his duly authorized representative upon request:

- Type and amount of carbonaceous cement and binder system applied to furnace load fed to the heat treat oven 306A.

[45CSR13, Permit R13-2058C, (Condition 4.2.1.), Equipment ID 306A]

7.3. Testing Requirements

7.3.1. When requested by the Secretary, tests to determine compliance with the CO, NO_x, SO_2, and VOC emission limitations set forth in 7.1.3 and 7.1.4. shall be conducted in accordance with the test methods specified below and as set forth in 40 CFR 60, Appendix A. The Secretary may approve an alternative test method in light of any technology advancements that may occur. Thirty (30) days prior to conducting such testing, the company shall submit a testing protocol following the guidelines set forth under 45CSR7A.

Pollutant	Test Method
CO	10 or 10B
NOx	7, 7A, 7B, 7C, 7D, or 7E
SOx	6, 6A, 6B, or 6C
VOC	25, 25A, or 25B

[45CSR13, Permit Number R13-1540B (Condition 4.3.1), & R13-1569A, (Condition B.1.), Emission Point IDS (306, 055, 079)]

7.3.2. Testing to determine compliance with the particulate emission limitations set forth under 7.1.3 and 7.1.4 of this Title V permit, shall be conducted in accordance with 45CSR7A - "Compliance Test Procedures for Regulation 7 - To Prevent and Control Particulate Air Pollution From Manufacturing Process Operations". Prior to conducting such testing, the company shall submit thirty (30) day in advance a testing protocol following guidelines set forth under 45CSR7A.

[45CSR13, Permit Number R13-1540B, (Condition 4.3.2), & R13-1569A, (Condition B.2.), Emission Point IDS (306, 055, 079)]

7.3.3. Compliance with the opacity standard, 7.1.7., shall be demonstrated by conducting a 40CFR60 Appendix A, Method 22 visible emission tests in accordance with the methods and schedule specified by 3.3.2 of this permit.

[45CSR§30-5.1.c.B.1.]

7.4. Recordkeeping Requirements

7.4.1. In order to demonstrate compliance with the **production limitations for graphite curing** established in 7.1.1. of this permit, the permittee shall maintain an operations log, summarized annually, on the amount of product cured in the 307 furnace. All related records shall be maintained on-site for a period of no less than five (5) years and made available to the Director or a duly authorized representative upon request. This information shall be "certified" per 3.5.1. by a Responsible Official.

[45CSR§30-5.1.c. Equipment ID (307)]

7.4.2. In order to determine compliance with the **Porous Carbon production limit** established in 7.1.6. of this Title V permit, the permittee shall keep and maintain monthly certified records of production on the Porous Carbon line by utilizing the Certification of Data Accuracy form, contained herein as Attachment B, which must be completed by a "Responsible Official" within fifteen (15) days after the end of each calender month. This information shall be maintained on-site for a period of no less than five (5) years and made available to the Director or his duly authorized representative upon request.

[45CSR13, Permit Number R13-1569A, (Condition B.3.) Equipment ID (NEP-406-H)]

7.4.3. For the walk-in cure furnace (Equipment ID: 306-A), the permittee shall keep monthly records of:

- Hours of furnace operation (hours per month)
- Natural gas usage (cubic feet per month)
- Hand-applied GRI coating usage (gallons per month)
- Number of pieces of stock per furnace cycle (# pieces per cycle)
- Number of furnace cycles (cycles per month)

The above information shall be maintained on-site for a period of no less than five (5) years and made available to the Secretary or his duly authorized representative upon request. Prior to being submitted to the Secretary, all records shall be certified and signed by a "Responsible Official" utilizing the attached Certification of Data Accuracy statement, contained herein as Attachment B.

[45CSR13, Permit Number R13-1540B, (Condition 4.4.4) Equipment ID (306-A)]

7.5. Reporting Requirements

7.5.1. Due to unavoidable malfunction of equipment, emissions exceeding those set forth in 45CSR7 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the malfunction. In cases of major equipment failure additional time periods may be granted by the Director provided a corrective program has been submitted by the owner or operator and approved by the Director.

[45CSR§7-9.1.]

7.5.2. The permittee shall notify the Secretary in writing at least 90 days in advance of any planned operational change(s) to the natural gas fired Benco Pre-heater (EP#320) and/or the electrical heating induction furnaces (EP#055 or EP#079) that would allow a non-nitrogen and/or non-argon atmosphere to be associated with the processing of Graphite Rigid Insulation.

[45CSR13, Permit Number R13-1540B, (Condition 4.5.1) Emission Point ID(s) (055, 079)]

8.0. Source-Specific Requirements for Raw Materials Handling Operations, Emission Point ID(s)[070, 074, 087]

8.1. Limitations and Standards

8.1.1. The maximum quantity of carbonaceous pack material to be processed through the high efficiency separating cyclone (G-2) shall not exceed 16,667 pounds per hour (PPH) and 9,834 tons per year (TPY).

[45CSR13, Permit Number R13-2047, (Condition A.1.), Equipment ID (G-2), Emission Point ID (087)]

8.1.2. The maximum emission rate of particulate matter to the atmosphere from Emission Point 087 shall not exceed 0.01 lb/hr and 0.044 tons per year. This requirement streamlines and assures compliance with 45CSR§7-4.1 as specified by 8.1.3. below.

[45CSR13, Permit Number R13-2047, (Condition A.2.), Emission Point (087)]

8.1.3. No person shall cause, suffer, allow or permit particulate matter (PM) to be vented into the open air from any type source operation or duplicate source operation, or from all air pollution control equipment installed on any type source operation or duplicate source operation in excess of the quantity specified in Table 45-7A as listed in the table below. Compliance with limitation 8.1.2. streamlines and assures compliance with this requirement for emission point 087.

Emission Point (I.D.)	Equipment Description	Emission Limitation (lb/hr)
070	***Graphite Pack Handling Equipment (Rotexes and Bins)***	**32.2**
074	***Hopper Dump Station, De-Duster, Elevators, Load-out Hoods, Dust Truck Load-out***	**32.2**

[45CSR§7-4.1., Emission Point ID (070, 074)]

8.1.4. No person shall cause, suffer, allow or permit emission of smoke and/or particulate matter into the open air from any process source operation which is greater than twenty (20) percent opacity, except as noted in subsections 3.2, 3.3, 3.4, 3.5, 3.6, and 3.7 of 45CSR7.

[45CSR§7-3.1., Emission Point ID (070, 074, 087)]

8.1.5. The provisions of 8.1.4. above shall not apply to smoke and/or particulate matter emitted from any process source operation which is less than forty (40) percent opacity for any period or periods aggregating no more than five (5) minutes in any sixty (60) minute period.

[45CSR§7-3.2, Emission Point ID (070, 074, 087)]

8.2. Monitoring Requirements

8.2.1. The permittee shall conduct an annual preventative maintenance inspection, cleaning, replacement, and refurbishment as appropriate, of all bags, bag connections, and dust hoppers of the baghouses pertaining to all emission points subject to 45CSR7 in order to ensure proper operation of the filters. Records shall be maintained on site for a period of no less than five (5) years stating the date and time of each baghouse's annual preventative maintenance activity, the results of the annual preventative maintenance activity and, if applicable, all corrective actions taken. These records shall also reflect any routine maintenance conducted in addition to the preventative maintenance activities specified above.

[45CSR§30-5.1.c.1.B.]

8.2.2. For the purpose of determining compliance with the maximum annual carbonaceous pack material throughput limitation established in 8.1.1, the company shall maintain monthly and annual records showing the amount of pack material processed. All related records shall be maintained on-site for a period of no less than five (5) years and made available to the Director or a duly authorized representative upon request. This information shall be certified per 3.5.1. by a Responsible Official.

[45CSR13, Permit Number R13-2047, (Condition B.3.), Equipment ID (G-2)]

8.2.3. The high efficiency separating cyclone (G-2), the primary dust collector (G-4), and the secondary dust collector (G-5) are to be properly maintained and operated to insure maximum collector efficiencies. Maintenance records shall be maintained on-site for a period of no less than five (5) years and made available to the Director or a duly authorized representative upon request. This information shall be certified per 3.5.1. by a Responsible Official.

[45CSR13, Permit Number R13-2047, (Condition B.4.), Equipment ID (G-2, G-4, G-5)]

8.3. Testing Requirements

8.3.1. Compliance with the opacity standard, 8.1.4., shall be demonstrated by conducting a 40CFR60 Appendix A, Method 22 visible emission tests in accordance with the methods and schedule specified by 3.3.2 of this permit.

[45CSR§30-5.1.c.B.1.]

8.3.2. At such reasonable times as the Director may designate, the operator of any manufacturing process source operation may be required to conduct or have conducted stack tests to determine the particulate matter loading in exhaust gases. Such tests shall be conducted in such manner as the Director may specify and be filed on forms and in a manner acceptable to the Director. The Director, or his duly authorized representative, may at his option witness or conduct such stack tests. Should the Director exercise his option to conduct such tests, the operator will provide all the necessary sampling connections and sampling ports to be located in such manner as the Director may require, power for test equipment and the required safety equipment such as scaffolding, railings and ladders to comply with generally accepted good safety practices.

[45CSR§7-8.1.]

8.4. Recordkeeping Requirements

8.4.1. The permittee shall maintain records quantifying the amount of material collected by air pollution control equipment in order to estimate actual emissions based on manufacturer's guaranteed control efficiency. This estimate of actual emission shall serve to demonstrate compliance with the PM emission limits of 8.1.2. and 8.1.3. of this permit.

[45CSR§30-5.1.c.1.B.]

8.5. Reporting Requirements

8.5.1. Due to unavoidable malfunction of equipment, emissions exceeding those set forth in 45CSR7 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the malfunction. In cases of major equipment failure additional time periods may be granted by the Director provided a corrective program has been submitted by the owner or operator and approved by the Director.

[45CSR§7-9.1.]

9.0. Source-Specific Requirements for the Graphite Furnaces and Purification Process, Emission Point ID(s) [231, 232, 235, 233, 236, 055, 079]

9.1. Limitations and Standards

9.1.1. Emissions to the atmosphere from the packed-bed scrubbers shall not exceed the following:

Emission Point ID	Maximum Hourly Emissions (lb/hr)			Maximum Annual Emissions (lb/yr)		
	PM	Free Chlorine	Total Chlorides	PM	Free Chlorine	Total Chlorides
055	0.4	0.124	0.0124	1,460	452.6	90.5
079	0.4	0.124	0.0124	1,460	452.6	90.5

This requirement streamlines compliance with the (lb/hr) PM limitation defined by 45CSR§7-4.1.

[45CSR13, Permit Number R13-1934B, (Condition 4.1.1.), Emission Points (055, 079)]

9.1.2. Operations related to chlorine injection of any of the electric furnaces identified as 055A, 055B, 055C, 055D, 055E, 055F, 055G, and 079B, or the chlorine cylinder storage cabinets 079A, 055H, and 055I without the benefit of emissions being controlled by the packed bed scrubber venting through Emission Point 055 or 079, shall be considered a violation of this permit.

[45CSR13, Permit Number R13-1934B, (Condition 4.1..2.), Emission Point ID (055, 079)]

9.1.3. During chlorine injection cycles, packed-bed scrubber ID(s) 055 shall be operated such that:

a. Scrubber liquor supplied to spray nozzles is maintained at a minimum pH of 8.0.

b. Scrubber liquor flow rate to top of the packed-bed scrubber shall be maintained at a minimum of 7 gallons per minute.

c. Scrubber liquor supply pressure shall be maintained at a minimum of 35 psia.

[45CSR13, Permit Number R13-1934B, (Condition 4.1.3.), Emission Point ID (055)]

9.1.4. During chlorine injection cycles, packed-bed scrubber ID 079 shall be operated such that:

a. Scrubber liquor supplied to spray nozzles is maintained at a minimum pH of 8.0.

b. Scrubber liquor flow rate to the top of the packed-bed scrubber shall be maintained at a minimum of 3.5 gallons per minute.

c. Scrubber liquor supply pressure shall be maintained at a minimum of 26 psia.

[45CSR13, Permit Number R13-1934B, (Condition 4.1.4.), Emission Point ID (079)]

9.1.5. The number of furnaces simultaneously generating chlorine emissions is limited only by the emission limits specified in 9.1.1. and 9.1.9. of this permit. However, emission rates from scrubber (ID: 055, or 079) shall be verified by performance determinations (stack testing) in accordance with 9.3.2 each time the total number of

furnaces discharging simultaneously to either scrubber increases beyond that in which previous compliance testing was based.

[45CSR13, Permit Number R13-1934B, (Condition 4.1.5.), Emission Point IDS (055, 079)]

9.1.6. While employing chlorine injection no more than one (1) of the electric furnaces identified as 055A, 055B, 055C, 055D, 055E, 055F, 055G, and 079B, shall be vented at a time with chlorine injection in progress to scrubbers (emission points 055 or 079) without first having conducted stack testing approved by the Division of Air Quality, verifying that operation of multiple furnaces utilizing chlorine injection can demonstrate compliance with the emission limits of 9.1.1 and 9.1.9.

[45CSR§30-5.1.c.B.1., 45CSR13, Permit Number R13-1934B, (Condition 4.1.6), Emission Point IDS (055, 079)]

9.1.7. No person shall cause, suffer, allow or permit emission of smoke and/or particulate matter into the open air from any process source operation which is greater than twenty (20) percent opacity, except as noted in subsections 3.2, 3.3, 3.4, 3.5, 3.6, and 3.7 of 45CSR7.

[45CSR13, Permit Number R13-1934B, (Condition 4.1.7)]

9.1.8. The provisions of 9.1.8. above shall not apply to smoke and/or particulate matter emitted from any process source operation which is less than forty (40) percent opacity for any period or periods aggregating no more than five (5) minutes in any sixty (60) minute period.

[45CSR13, Permit Number R13-1934B, (Condition 4.1.8)]

9.1.9. Emission points 055 and 079 shall not result or cause emissions of hydrochloric acid exceeding a concentration of 210 mg/m^3.

[45CSR13, Permit Number R13-1934B, (Condition 4.1.9), Emission Points (055, 079)]

9.1.10 The permittee shall abide by the following work practice standards/maintenance procedures in order to maintain the manufacturer's warranty pertaining to the control efficiency of the 055 and 079 scrubbers:

The permittee shall record once per furnace cycle, whenever chlorine gas is being injected, the pressure drop reading across the associated scrubber. A reading greater than three (3) inches of water column above the standard pressure drop conditions in which compliance has been demonstrated is considered to be a deviation.

In the event the parametric monitoring described above results in a measurement outside the established operating range(s), the permittee shall document it as a deviation. Deviations are not necessarily a determination of non-compliance with established emission limits in Section 9.1.1 and 9.1.9 of this permit, however, each deviation shall trigger an inspection of the control equipment.

[45CSR§30-5.1.c.B.1., 45CSR13, Permit Number R13-1934B, (Condition 4.1.10), Emission Point ID(s) (055, 079)]

9.1.11 **Operation and Maintenance of Air Pollution Control Equipment.** The permittee shall, to the extent practicable, install, maintain, and operate all pollution control equipment listed in Section 1.0 and associated monitoring equipment in a manner consistent with safety and good air pollution control practices for minimizing emissions, or comply with any more stringent limits set forth in this permit or as set forth by any State rule, Federal regulation, or alternative control plan approved by the Secretary.

[45CSR13, Permit Number R13-1934B, (Condition 4.1.11), Emission Points (055, 079)]

9.2. Monitoring Requirements

9.2.1. In order to demonstrate compliance with Standard Limitations 9.1.1., 9.1.3., and 9.1.9. of this permit the following operating parameters, on scrubbers 055 and 079, shall be recorded once per operator shift whenever chlorine injection is utilize.

- The liquid flow rate (gal/min) supplied to the top of the packed bed column
- The liquid pressure delivered to the spray nozzles (psia)
- The pH of the recycle liquor within the liquid circulation line

In the event the parametric monitoring described above results in a parameter measurement outside the range(s) established in 9.1.3, or after stack testing - the range(s) in which compliance was demonstrated per 9.3.2, the permittee shall document it as an deviation in accordance with 9.4.3. Deviations are not necessarily a determination of noncompliance with the emission limits of 9.1.1 or 9.1.9, however each deviation shall trigger an inspection of the control equipment.

[45CSR§30-5.1.c.B.1., 45CSR13, Permit Number R13-1934B, (Condition 4.2.1), Emission Points (055, 079)]

9.3. Testing Requirements

9.3.1. Compliance with the opacity standard, 9.1.7., shall be demonstrated by conducting a 40CFR60 Appendix A, Method 22 visible emission tests in accordance with the methods and schedule specified by 3.3.2 of this permit.

[45CSR§30-5.1.c.B.1., 45CSR13, Permit Number R13-1934B, (Condition 4.3.1), Emission Point IDS (231, 232, 235, 233, 236, 055, 079)]

9.3.2. Stack testing shall be conducted within 180 days of permit issuance or within 90 days of initiating chlorine injection into the purification furnaces whichever comes later, in order to determine compliance with the emission limitations set forth in 9.1.1. and 9.1.9. as well as the control limits defined by 9.1.3. In addition, compliance testing shall serve to define the margin of compliance as well as establish the relationship between parametric monitoring ranges and atmospheric emissions. These tests shall be in accordance with EPA test methods referenced in 40 CFR 60, Appendix A. These methods shall include, but are not limited to Method 26A of the aforementioned Appendix A. Prior to conducting such testing, the permittee shall submit a testing protocol following those guidelines set forth under 3.3.1.c. Said testing protocol shall be approved by the Director prior to the testing being conducted. Provided the performance test demonstrates compliance with all applicable emission limitations, then the control parameter ranges documented during the test shall be used to define an

deviation per 9.2.1 of this permit. All stack testing results shall be reported to the Director of the West Virginia Division of Air Quality within 60 days of completing stack measurements.

All relevant process data such as cycle time, temperature, material loading, and chlorine injection rates shall be defined with respect to percent of maximum potential capacity in the protocol as well as documented during the performance test. Additionally, all relevant control device parameters such as those monitored according to 9.2.1 and any associated interlock set points shall also be addressed within the protocol as well as documented during the stack test. The protocol should discuss the relationship between the monitored parameters and compliance with emission limitations as well as what possible ranges compliance is expected to be maintained. It is important to note that the emission testing shall be conducted under the operating conditions that result in the highest pollutant loading to the associated control equipment.

[45CSR§30-5.1.c.B.1., 45CSR13 Permit Number R13-1934B, (Condition 4.3.2), Emission Point IDS (055, 079)]

9.4. Recordkeeping Requirements

9.4.1. Records of all monitoring activities prescribed within 9.2.1 shall be maintained and kept up to date. Additionally, all control equipment maintenance shall also be documented in order to demonstrate compliance with the work practice standards specified by 9.1.10. These records shall be maintained on site for no less than 5 years. These records shall be made available upon request of the Director or a duly authorized representative.

[45CSR13, Permit Number R13-1934B, (Condition 4.4.4), Emission Points (055, 079)]

9.4.2. An operations log shall be maintained for each of the electric purification furnaces to document how many purification runs were conducted by recording the run number, furnace number, date, and total amount of chlorine used during purification via chlorine injection. These records shall be made available and certified by a "responsible official" in accordance with 3.5.1. upon request of the Director or a duly authorized representative.

[45CSR13, Permit Number R13-1934B, (Condition 4.4.5), Emission Points (055, 079)]

9.4.3. In the event of a control parameter deviation as defined by 9.2.1. the permittee shall document any corrective actions taken to bring the system back within an acceptable operating range as well as any measures taken to mitigate excess emission during the deviation, such as interlock sequences and any actions taken to prevent a reoccurrence. Each deviation report shall include the time the event was observed in addition to the time in which the parameter was brought back into an acceptable range. These records shall be made available and certified by a "responsible official" in accordance with 3.5.1, upon request of the Director or a duly authorized representative.

[45CSR13, Permit Number R13-1934B, (Condition 4.4.6), Emission Points (055, 079)]

9.4.4. The Acheson and E-Graphitization furnaces shall maintain an operations log to document the weight of graphite processed. These records shall be made available and certified by a "responsible official" in accordance with 3.5.1, upon request of the Director or a duly authorized representative.

[45CSR13, Permit Number R13-1934B, (Condition 4.4.7), Emission Points (055, 079)]

9.4.5. **Record of Maintenance of Air Pollution Control Equipment.** For all pollution control equipment listed in Section 1.0, the permittee shall maintain accurate records of all required pollution control equipment inspection and/or preventative maintenance procedures.

[45CSR13, Permit Number R13-1934B, (Condition 4.4.2), Emission Points (055, 079)]

9.4.6. **Record of Malfunctions of Air Pollution Control Equipment.** For all air pollution control equipment listed in Section 1.0, the permittee shall maintain records of the occurrence and duration of any malfunction or operational shutdown of the air pollution control equipment during which excess emissions occur. For each such case, the following information shall be recorded:

a. The equipment involved.

b. Steps taken to minimize emissions during the event.

c. The duration of the event.

d. The estimated increase in emissions during the event.

For each such case associated with an equipment malfunction, the additional information shall also be recorded:

e. The cause of the malfunction.

f. Steps taken to correct the malfunction.

g. Any changes or modifications to equipment or procedures that would help prevent future recurrences of the malfunction.

[45CSR13, Permit Number R13-1934B, (Condition 4.4.3), Emission Points (055, 079)]

9.5. Reporting Requirements

9.5.1. Due to unavoidable malfunction of equipment, emissions exceeding those set forth in 45CSR7 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the malfunction. In cases of major equipment failure additional time periods may be granted by the Director provided a corrective program has been submitted by the owner or operator and approved by the Director.

[45CSR13, Permit Number R13-1934B, (Condition 4.5.1)]

10.0. Source-Specific Requirements for the Graphite Machining and Materials Handling Process, Emission Point ID(s)[407, 056, 057, 058, 059, 060, 061, 062, 063, 064, 065, 066, 067, 076, 077]

10.1. Limitations and Standards

10.1.1. No person shall cause, suffer, allow or permit emission of smoke and/or particulate matter into the open air from any process source operation which is greater than twenty (20) percent opacity, except as noted in subsections 3.2, 3.3, 3.4, 3.5, 3.6, and 3.7 of 45CSR7.

[45CSR§7-3.1]

10.1.2. The provisions of 10.1.1 above shall not apply to smoke and/or particulate matter emitted from any process source operation which is less than forty (40) percent opacity for any period or periods aggregating no more than five (5) minutes in any sixty (60) minute period.

[45CSR§7-3.2]

10.1.3. No person shall cause, suffer, allow or permit particulate matter (PM) to be vented into the open air from any type source operation or duplicate source operation, or from all air pollution control equipment installed on any type source operation or duplicate source operation in excess of the quantity specified in Table 45-7A as summarized in the table below.

Emission Point (I.D.)	Equipment Description	Emission Limitation (lb/hr)
407	End Facing Saw	***32.2***
056	BO Tower Baghouse & Associated Equipment	***28.0***
057	Graphite Machining Zone 11 Baghouse	***0.48***
058	Graphite Machining Zone 10 Baghouse	***0.48***
059	Graphite Machining Zone 8 Baghouse	***0.48***
060	Graphite Machining Zone 7 Baghouse	***0.48***
061	Graphite Machining Zone 6 Baghouse	***0.48***
062	Graphite Machining Zone 5 Baghouse	***0.48***
063	Graphite Machining Zone 4 Baghouse	***0.48***
064	Graphite Machining Zone 3 Baghouse	***0.48***
065	Graphite Machining Zone 2 Baghouse	***0.48***
066	Graphite Machining Zone 1 Baghouse	***0.48***

067	Graphite Machining Zone 12 Baghouse	***0.48***
076	Graphite Machining Zone 9 Baghouse	***0.48***
077	Filter Receiver Bin Vacuum Pump	***2.4***

[45CSR§7-4.1]

10.2. Monitoring Requirements

10.2.1. The permittee shall conduct an **annual** preventative maintenance inspection, cleaning, replacement, and refurbishment as appropriate, of all bags, bag connections, and dust hoppers of the baghouses pertaining to all emission points subject to 45CSR7 in order to ensure proper operation of the filters. Records shall be maintained on site for a period of no less than five (5) years stating the date and time of each baghouse's annual preventative maintenance activity, the results of the annual preventative maintenance activity and, if applicable, all corrective actions taken. These records shall also reflect any routine maintenance conducted in addition to the preventative maintenance activities specified above.

[45CSR§30-5.1.c.1.B.]

10.3. Testing Requirements

10.3.1. Compliance with the opacity standard, 10.1.1., shall be demonstrated by conducting a 40CFR60 Appendix A, Method 22 visible emission tests in accordance with the methods and schedule specified by 3.3.2 of this permit.

[45CSR§30-5.1.c.B.1]

10.4. Recordkeeping Requirements

10.4.1. The permittee shall maintain annual records quantifying the amount of material collected by air pollution control equipment in order to estimate actual emissions based on manufacturer's guaranteed control efficiency. This estimate of actual emissions shall serve to demonstrate compliance with the PM emission limits of 10.1.3. of this permit.

[45CSR§30-5.1.c.1.B]

10.5. Reporting Requirements

10.5.1. Due to unavoidable malfunction of equipment, emissions exceeding those set forth in 45CSR7 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the malfunction. In cases of major equipment failure additional time periods may be granted by the Director provided a corrective program has been submitted by the owner or operator and approved by the Director.

[45CSR§7-9.1]

11.0. Source-Specific Requirements for the Shipping and Quality Control Operations, Emission Point ID(s)[402 and 053, 209, 210]

11.1. Limitations and Standards

11.1.1. No person shall cause, suffer, allow or permit emission of smoke and/or particulate matter into the open air from any process source operation which is greater than twenty (20) percent opacity, except as noted in subsections 3.2, 3.3, 3.4, 3.5, 3.6, and 3.7 of 45CSR7.

[45CSR§7-3.1]

11.1.2. The provisions of 11.1.1. above shall not apply to smoke and/or particulate matter emitted from any process source operation which is less than forty (40) percent opacity for any period or periods aggregating no more than five (5) minutes in any sixty (60) minute period.

[45CSR§7-3.2]

11.1.3. No person shall cause, suffer, allow or permit particulate matter (PM) to be vented into the open air from any type source operation or duplicate source operation, or from all air pollution control equipment installed on any type source operation or duplicate source operation in excess of the quantity specified in Table 45-7A.

[45CSR§7-4.1]

11.2. Monitoring Requirements

11.2.1. The permittee shall conduct an **annual** preventative maintenance inspection, cleaning, replacement, and refurbishment as appropriate, of all bags, bag connections, and dust hoppers of the baghouses pertaining to all emission points subject to 45CSR7 in order to ensure proper operation of the filters. Records shall be maintained on site for a period of no less than five (5) years stating the date and time of each baghouse's annual preventative maintenance activity, the results of the annual preventative maintenance activity and, if applicable, all corrective actions taken. These records shall also reflect any routine maintenance conducted in addition to the preventative maintenance activities specified above.

[45CSR§30-5.1.c.1.B., Emission Point ID (402, 053)]

11.3. Testing Requirements

11.3.1. Compliance with the opacity standard, 11.1.1., shall be demonstrated by conducting a 40CFR60 Appendix A, Method 22 visible emission tests in accordance with the methods and schedule specified by 3.3.2 of this permit.

[45CSR§30-5.1.c.B.1]

11.4. Recordkeeping Requirements

11.4.1. The permittee shall maintain records quantifying the amount of material collected by air pollution control equipment in order to estimate actual emissions based on manufacturer's guaranteed control efficiency. This estimate of actual emission shall serve to demonstrate compliance with the PM emission limits of 11.1.3. of this permit.

[45CSR§30-5.1.c.1.B., Emission Point ID (402, 053)]

11.5. Reporting Requirements

11.5.1. Due to unavoidable malfunction of equipment, emissions exceeding those set forth in 45CSR7 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the malfunction. In cases of major equipment failure additional time periods may be granted by the Director provided a corrective program has been submitted by the owner or operator and approved by the Director.

[45CSR§7-9.1.]

12.0. Source-Specific Requirements for the Mill Mix and Forming Operations, Emission Point ID(s)[001, 002, 003, 004, 005, 006, 007, 008, 009, 010, 011, 012, 013, 014, 015, 016, 017, 018, 019, 020, 021, 022, 023, 024, 025, 026, 030, 031, 090, 091, 092]

12.1. Limitations and Standards

12.1.1. Particulate emissions from emission point (019) shall not exceed the maximum emission limitation of 1.06 lb/hr. This requirement streamlines and assures compliance with the PM allowable rates defined by 45CSR§7-4.1.

[45CSR13, Permit Number R13-0874, (Condition A.1.), Emission Point ID (019)]

12.1.2. The G 50/90 production process shall not exceed 2000 pounds per hour of "green"carbonaceous mix product.

[45CSR13, Permit Number R13-0874, (12/11/95 Administrative Update), Equipment ID (092)]

12.1.3. No person shall cause, suffer, allow or permit emission of smoke and/or particulate matter into the open air from any process source operation which is greater than twenty (20) percent opacity, except as noted in subsections 3.2, 3.3, 3.4, 3.5, 3.6, and 3.7 of 45CSR7.

[45CSR§7-3.1.]

12.1.4. The provisions of 12.1.3. above shall not apply to smoke and/or particulate matter emitted from any process source operation which is less than forty (40) percent opacity for any period or periods aggregating no more than five (5) minutes in any sixty (60) minute period.

[45CSR§7-3.2.]

12.1.5. No person shall cause, suffer, allow or permit particulate matter (PM) to be vented into the open air from any type source operation or duplicate source operation, or from all air pollution control equipment installed on any type source operation or duplicate source operation in excess of the quantity specified in Table 45-7A and summarized below.

Emission Point (I.D.)	Equipment Description	Emission Limitation (lb/hr)
001	Storage Silo	31.0
002	Storage Silo	31.0
003	Storage Silo	31.0
004	Storage Silo	31.0
005	Storage Silo	31.0
006	Storage Silo	31.0
007	Storage Silo	31.0

008	Storage Silo	31.0
009	Storage Silo	31.0
010	Storage Silo	31.0
011	Storage Silo	31.0
012	Continuous fill Stations 1-6, 4/ Rail Car Unloading, Surge Bin, Elevator	31.0
013	Crusher, Rail Car Load Vent, Storage Bin at Track, Elevator, Conveyor	31.0
014	Baghouse #1, #1 Mill Elevator, #1 Coke Elevator & Associated Equipment	31.0
015	Baghouse #2, Coke Flour Bin, Coke Particle Bin	13.6
016	#1 Mill Baghouse, Mill Cyclone	8.0
017	#2 Mill Baghouse, Mill Cyclone	8.0
018	Baghouse #3Ramond Mill & Mill Cyclone	8.0
020	Baghouse for Crusher and Rotex	16

022	#3 Baghouse, Dust and Particle Bins/ Fill Stations, Elevators	28.0
023	House Air Veyor	28.0
024	House Air Veyor	28.0
025	Hopper Bin Vent	10.0
026	Baghouse for Charge Ports and Rail Load Out/ Dust Rolloff/ Super Sack Loading	32.2
030	40" Press Coolers and Mixers, Press Vacuum Pump /Discharge Chute/Conveyor Belt	13.78
031	PGW Press System/ Mold Filling Hood/ Belt Conveyor G50/90 System, Mixers,Conveyors, Loading stations, CHP Chiper	9.02
090	Bld. 3 Hoffman Housekeeping Vac. System	2.4
091	Pitch Receiver Bin Vent	6.0
092	Air Classifying Mill Receiver Bin	6.0

[45CSR§7-4.1]

12.2. Monitoring Requirements

12.2.1. The permittee shall conduct an **annual** preventative maintenance inspection, cleaning, replacement, and refurbishment as appropriate on all control equipment used to abate PM emissions subject to 45CSR7 limitations in order to assure the designed removal efficiencies are maintained. Records shall be maintained on site for a period of no less than five (5) years, which state the date and time preventative maintenance activities occur, the results of the preventative maintenance and, if applicable, all corrective actions taken. These records shall also reflect any non-routine maintenance conducted in addition to the preventative maintenance activities specified above.

[45CSR§30-5.1.c.1.B.]

12.2.2. In order to assure compliance with the PM emission limits established by 12.1.5 for the (2) dust injection baghouses corresponding to emission points (030 and 031) the permittee shall monitor and record at least once per operator shift, the pressure drop across each baghouse (ID 030 and 031) when in operation. In the event the parametric monitoring described above results in a parameter measurement outside the range established as part of the 12.3.2 testing requirements, the permittee shall document it as a deviation in accordance with 12.4.3.

Deviations are not necessarily a determination of noncompliance with the emission limits established by 12.1.5., however each deviation shall trigger an inspection of the control equipment, which includes a visible emissions check as well as initiate the recordkeeping requirements of 12.4.3.

In addition to the parametric monitoring described above the permittee shall also operate the dust injection system in accordance with the following work practice standards.

a.) The programmable logic controller (PLC) shall monitor dust levels in the main dust supply bin and the mass flow bin on each collector (ID 030 and 031). When the PLC receives a low dust level signal from any of the bins in the dust injection system, an alarm condition is indicated at the operator interface. The alarm prohibits initiation of any new batching operations for any systems serviced by the control devices referenced above.

b.) At least monthly dust amounts removed from the system shall be recorded in order to determine the amount of makeup dust added to each baghouse corresponding to emission points (ID 030 and 031)

c.) The dust injection rate into each baghouse via its respective mass flow bin and main supply dust bin shall be documented during the performance test in accordance with 12.3.2. and maintained accordingly for establishing minimum set points .

d.) The position of the make up air dampers shall be documented during the performance test in accordance with 12.3.2. and maintained accordingly throughout normal operations.

e.) Until such time as performance testing parameters are established, GrafTech's best management practices for pressure drop across each baghouse is established as follows:

$3 \leq \Delta P \leq 10$ inches W.C.

[45CSR§30-5.1.c.1.B.]

12.2.3. In order to assure compliance with the 1.06 lb/hr PM limit established by 12.1.1. the permittee shall monitor and record the pressure drop across the baghouse ID (019) at least once per operator shift when in operation. In the event the parametric monitoring described above results in a parameter measurement outside of the best work practice range established below, the permittee shall document it as a deviation in accordance with 12.4.3. Deviations are not necessarily a determination of noncomplaince with the emission limit of 12.1.1, however each deviation shall trigger an inspection of the control equipment as well as the recordkeeping requirements of 12.4.3.

UCARs Best Work Practice Operating Range 6 < (delta P) < 11 inches W.C.

[45CSR§30-5.1.c.1.B.]

12.3. Testing Requirements

12.3.1. Compliance with the opacity standard, 12.1.3., shall be demonstrated by conducting monthly 40CFR60 Appendix A, Method 22 visible emission tests in accordance with the methods and schedule specified by 3.3.2 of this permit.

[45CSR§30-5.1.c.B.1., Emission Point IDS (All)]

12.3.2. The permittee shall conduct stack testing on each of the dust injected baghouses (ID 030 and 031) no later than June 30, 2008. The testing shall evaluate compliance with the PM emission limitation defined by 12.1.5 as well as to define POM control efficiencies. The testing shall be designed to speciate and quantify the amount of PM released as POM to the atmosphere. The test methods employed shall include, but not necessarily be limited to the following: SW-846 Methods 0010, 8270, and 3542. Prior to conducting such testing the permittee shall submit a testing protocol following the guidelines set forth under 45CSR7A. Said testing protocol shall be approved by the Director prior to conducting such testing. Provided the performance test demonstrates compliance with all applicable emission limitations then the control parameter ranges documented during the test shall be used to define deviations and the work practice standards per12.2.2. of this permit. All stack test results shall be reported to the Director of the West Virginia Division of Air Quality within 60 days of completing stack measurements.

All relevant process data such as process weight rates, raw materials utilized, batch times, filter pressure drops, dust injection/makeup rates/times, damper position/inlet baghouse temperatures, etc. shall be defined with respect to percent of maximum potential where relevant in the protocol as well as documented during the performance test. The testing protocol should discuss the relationship between the monitored parameters and compliance with emission limitations as well as what possible ranges compliance is expected to be maintained. It is important to note that the emission testing shall be conducted under practical operating conditions that result in the highest loading of the associated control equipment.

[45CSR§30-5.1.c.B.1., Emission Point IDS (030, 031)]

12.4. Recordkeeping Requirements

12.4.1. The permittee shall maintain records quantifying the amount of material collected by air pollution control equipment in order to estimate actual emissions based on manufacturer's guaranteed control efficiency. This estimate of actual emissions shall serve to demonstrate compliance with the PM emission limits of 12.1.5, with the exception of the Dust Injection Baghouses, which are required to conduct performance testing to define additional continuous compliance parameters in accordance with 12.3.2

[45CSR§30-5.1.c.1.B.]

12.4.2. Records of all monitoring activities required within section 12.2.2. or 12.2.3. above shall be maintained and kept up to date. Additionally, all control equipment downtime for maintenance shall be documented. Said records shall be made available and certified by a "responsible official" upon request of the Director or a duly authorized representative.

[45CSR§30-5.1.c.1.B.]

12.4.3. In the event of a control parameter deviation as defined by section 12.2.2. or 12.2.3., the permittee shall document any corrective actions taken to bring the system back within an acceptable operating range as well as any measures taken to mitigate excess emission during the deviation, such as interlock sequences and any actions taken to prevent a reoccurrence. Each deviation report shall include the date and time the event was observed in addition to the time in which the parameter was brought back into an acceptable range. These records shall be made available and certified by a "responsible official" upon request of the Director or a duly authorized representative.

[45CSR§30-5.1.c.1.B.]

12.4.4. The G50/90 production process shall maintain a log to record the weight of "green" carbonaceous mix product as well as the daily hours of production. These records shall be summarized into monthly reports to confirm compliance with the 2000 pounds per hour limitation of 12.1.2. Compliance with this limit shall be based on a daily average and the monthly summaries shall document each daily average while highlighting the highest hourly average for the month as well as any exceedences of the 12.1.2 limit. These records shall be made available and certified by a "responsible official" upon request of the Director or a duly authorized representative.

[45CSR§30-5.1.c.1.B.]

12.4.5. A log shall be maintained which quantifies the amount of green mix processed through mixers (30A, 30B, 32A, 32B, 33A, 33B, 34A, 34B, 35A, 35B, 19C, and 19D) summarized on an annual basis. These records shall be made available and certified by a "responsible official" upon request of the Director or a duly authorized representative.

[45CSR§30-5.1.c.1.B.]

12.5. Reporting Requirements

12.5.1. Due to unavoidable malfunction of equipment, emissions exceeding those set forth in 45CSR7 may be permitted by the Director for periods not to exceed ten (10) days upon specific application to the Director. Such application shall be made within twenty-four (24) hours of the malfunction. In cases of major equipment failure additional time periods may be granted by the Director provided a corrective program has been submitted by the owner or operator and approved by the Director.

Attachment B

CERTIFICATION OF DATA ACCURACY

I, the undersigned, hereby certify that, based on information and belief formed after reasonable inquiry, all information contained in the attached _____, representing the period beginning _____ and ending _____, and any supporting documents appended hereto, is true, accurate, and complete.

Signature[1]
(please use blue ink)Responsible Official or Authorized RepresentativeDate

Name & Title
(please print or type)NameTitle

Telephone No.Fax No.

---

[1]This form shall be signed by a "Responsible Official." "Responsible Official" means one of the following:

a.For a corporation: The president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(I)the facilities employ more than 250 persons or have a gross annual sales or expenditures exceeding $25 million (in second quarter 1980 dollars), or

(ii)the delegation of authority to such representative is approved in advance by the Director;

b.For a partnership or sole proprietorship: a general partner or the proprietor, respectively;

c.For a municipality, State, Federal, or other public entity: either a principal executive officer or ranking elected official. For the purposes of this part, a principal executive officer of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of U.S. EPA); or

d.The designated representative delegated with such authority and approved in advance by the Director.

WV DAQ Response to Company Comments

March 16, 2006

Kenneth E. Curry, PE
Chief Plant Engineer
UCAR Carbon Company Inc.
P.O. Box 2170
Clarksburg, WV 26302

RE: Response to Company Comments
UCAR Carbon Company Inc.
Anmoore Plant
Permit No. R30-03300001-2006

Dear Mr. Curry:

I would like to thank you for the comments received February 23, 2006. In order to document the conclusions that were reached, the comments as relayed to the Title V permit engineer are stated below with the referenced section from the permit along with the response to each as follows:

Comment 1 (Section 7.4.3. pg. 51): MRR for 306-A- Recording the total number of pieces of stock per furnace cycle is not realistic given that the oven is used for short <1 hr dry out cycles as well.

7.4.3. For the walk-in cure furnace (Equipment ID: 306-A), the permittee shall keep monthly records of:

- Hours of furnace operation (hours per month)
- Natural gas usage (cubic feet per month)
- Hand-applied GRI coating usage (gallons per month)
- Number of pieces of stock per furnace cycle (# pieces per cycle)
- Number of furnace cycles (cycles per month)

The above information shall be maintained on-site for a period of no less than five (5) years and made available to the Secretary or his duly authorized representative upon request. Prior to being submitted to the Secretary, all records shall be certified and signed by a "Responsible Official" utilizing the attached Certification of Data Accuracy statement, contained herein as Attachment B.
[45CSR13, Permit Number R13-1540B, (Condition 4.4.4) Equipment ID (306-A)]

Co. Proposed Change:

1. Delete this provision
2. See proposed MRR for revisions filed for R13-2058B to record cement usage per oven cycle for 306-A in addition to existing requirements to record GRI sprayed on coating per existing permit requirements.

DAQ Response 1: The 7.4.3 monitoring requirements were found to pertain only to the rigid graphite manufacturing process which utilizes the 306-A furnace. This requirement stems from minor source NSR permit R13-1540B, which addresses operations pertaining to rigid graphite and not the IHM process encompassed by the R13-2058B permit. This furnace was originally permitted under R13-1540A to cure a maximum of 6 pieces of product during each 3 hour furnace cycle. Taking this into account, there seems to be a discrepancy with what is permitted and the senario you describe as unrealistic, accounting for the total number of stock pieces cured in the oven with less than 1 hour drying cycles. Therefore, it would not be appropriate to change recordkeeping for the rigid graphite production process to accommodate changes needed in the IHM permit R13-2058. The DAQ agrees that monitoring cement usage for each cure cycle would be adequate for demonstrating compliance with emission limitations for the IHM process. However, emission limits for curing IHM product with the 306-A furnace needs to be developed before any changes to monitoring can take place. Therefore, the Title V permit cannot create new limitations and associated monitoring requirements without UCAR first receiving a minor source permit modification to allow this mode of production under the relevant 45CSR13 permit. As far as the rigid graphite permit, R13-1540B, if the number of pieces treated within the furnace, as referenced in 7.4.3 of the Title V permit, is not necessary for quantifying emissions then UCAR can present this case to the 45CSR13 permitting group as a request for an administrative amendment. The Title V group has the ability to streamline requirements to reflect the most stringent limitations or associated monitoring. However, if tracking the number of pieces is removed, this would be a relaxation of the recordkeeping requirements not streamlining. To relax such a requirement a specific finding needs to be made within a Rule 13 permitting action, which provides justification of the change.

Comment 2 (Section 12.1.5. pg. 63): Is description for scrubber 032 correct?

032	#6/ #2 Coke Bed Filter for PGW Press System/ Mold Filling Hood/ Belt Conveyor	3.12

DAQ Response 2: After discussing the details of what is actually vented to the 032 emission point it was confirmed by UCAR that only the #6 Coke Bed Filter vents to this point and the original draft was in error. The emission unit table of Section 1 of the permit was also updated to reflect this change.

Comment 3 (Section 12.2.3. pg. 65): Delta P is incorrect

12.2.3. In order to assure compliance with the 1.06 lb/hr PM limit established by 12.1.1. the permittee shall monitor and record the pressure drop across the baghouse ID (019) at least once per operator shift when in operation. In the event the parametric monitoring described above results in a parameter measurement outside of the best wok practice range established below, the permittee shall document it as a deviation in accordance with 12.4.3. Deviations are not necessarily a determination of noncomplaince with the emission limit of 12.1.1, however each deviation shall trigger an inspection of the control equipment as well as the recordkeeping requirements of 12.4.3.

UCARs Best Work Practice Operating Range .5 < (delta P) < 2 inches W.C.
[45CSR§30-5.1.c.1.B.]

Co. proposed change - Change range to read 0.5 < delta P <3 inches W.C.

Response 3: After discussions with UCAR the DAQ agrees that this range should be changed based on manufacture's specifications.

Comment 4: (Section 12.4.5. pg. 66) New requirement for grand fathered source.

12.4.5. A log shall be maintained which quantifies the amount of green processed through mixers (30A, 30B, 31A, 31B, 32A, 32B, 33A, 33B, 34A, 34B, 35A, 35B, 19C, and 19D) as well as the hours of production. These records shall be made available and certified by a "responsible official" upon request of the Director or a duly authorized representative.
[45CSR§30-5.1.c.1.B.]

Co. Proposed Change - Delete this requirement as total "green" production per/yr is already monitored for AEI (annual emissions inventory) purposes and total number of mixer cycles is back calculated from that number.

Response 4: After discussions with UCAR, an agreement was arrived at to remove the hours of production tracking and focus on the amount of production conducted on an annual basis since the primary intent of this recordkeeping requirement was to obtain production data, which can be used to verify that POM emissions do not exceed 10 tons annually for major source HAP applicability. The requirement was changed to the following:

12.4.5. A log shall be maintained which quantifies the amount of green mix processed through mixers (30A, 30B, 31A, 31B, 32A, 32B, 33A, 33B, 34A, 34B, 35A, 35B, 19C, and 19D) summarized on an annual basis. These records shall be made available and certified by a "responsible official" upon request of the Director or a duly authorized representative.
[45CSR§30-5.1.c.1.B.]

Sincerely,

Jesse Hanshaw, PE
Title V Permit Engineer
